details-v2

details-v2

```
apiVersion: networking.istio.io/v1alpha3
```

```
kind: VirtualService
```

```
spec:
```

```
  hosts:
```

```
  - reviews
```

```
  http:
```

```
    - route:
```

```
      - destination:
```

```
        host: reviews
```

```
        subset: v2
```

t The host requested by the client

t Routing for HTTP traffic

t The destination host routed by Istio

t The subset defined in the DestinationRule

```
apiVersion: networking.istio.io/v1alpha3
```

```
kind: DestinationRule
```

```
spec:
```

```
  host: reviews
```

```
  subsets:
```

```
    - name: v1
```

```
      labels:
```

```
        version: v1
```

```
    - name: v2
```

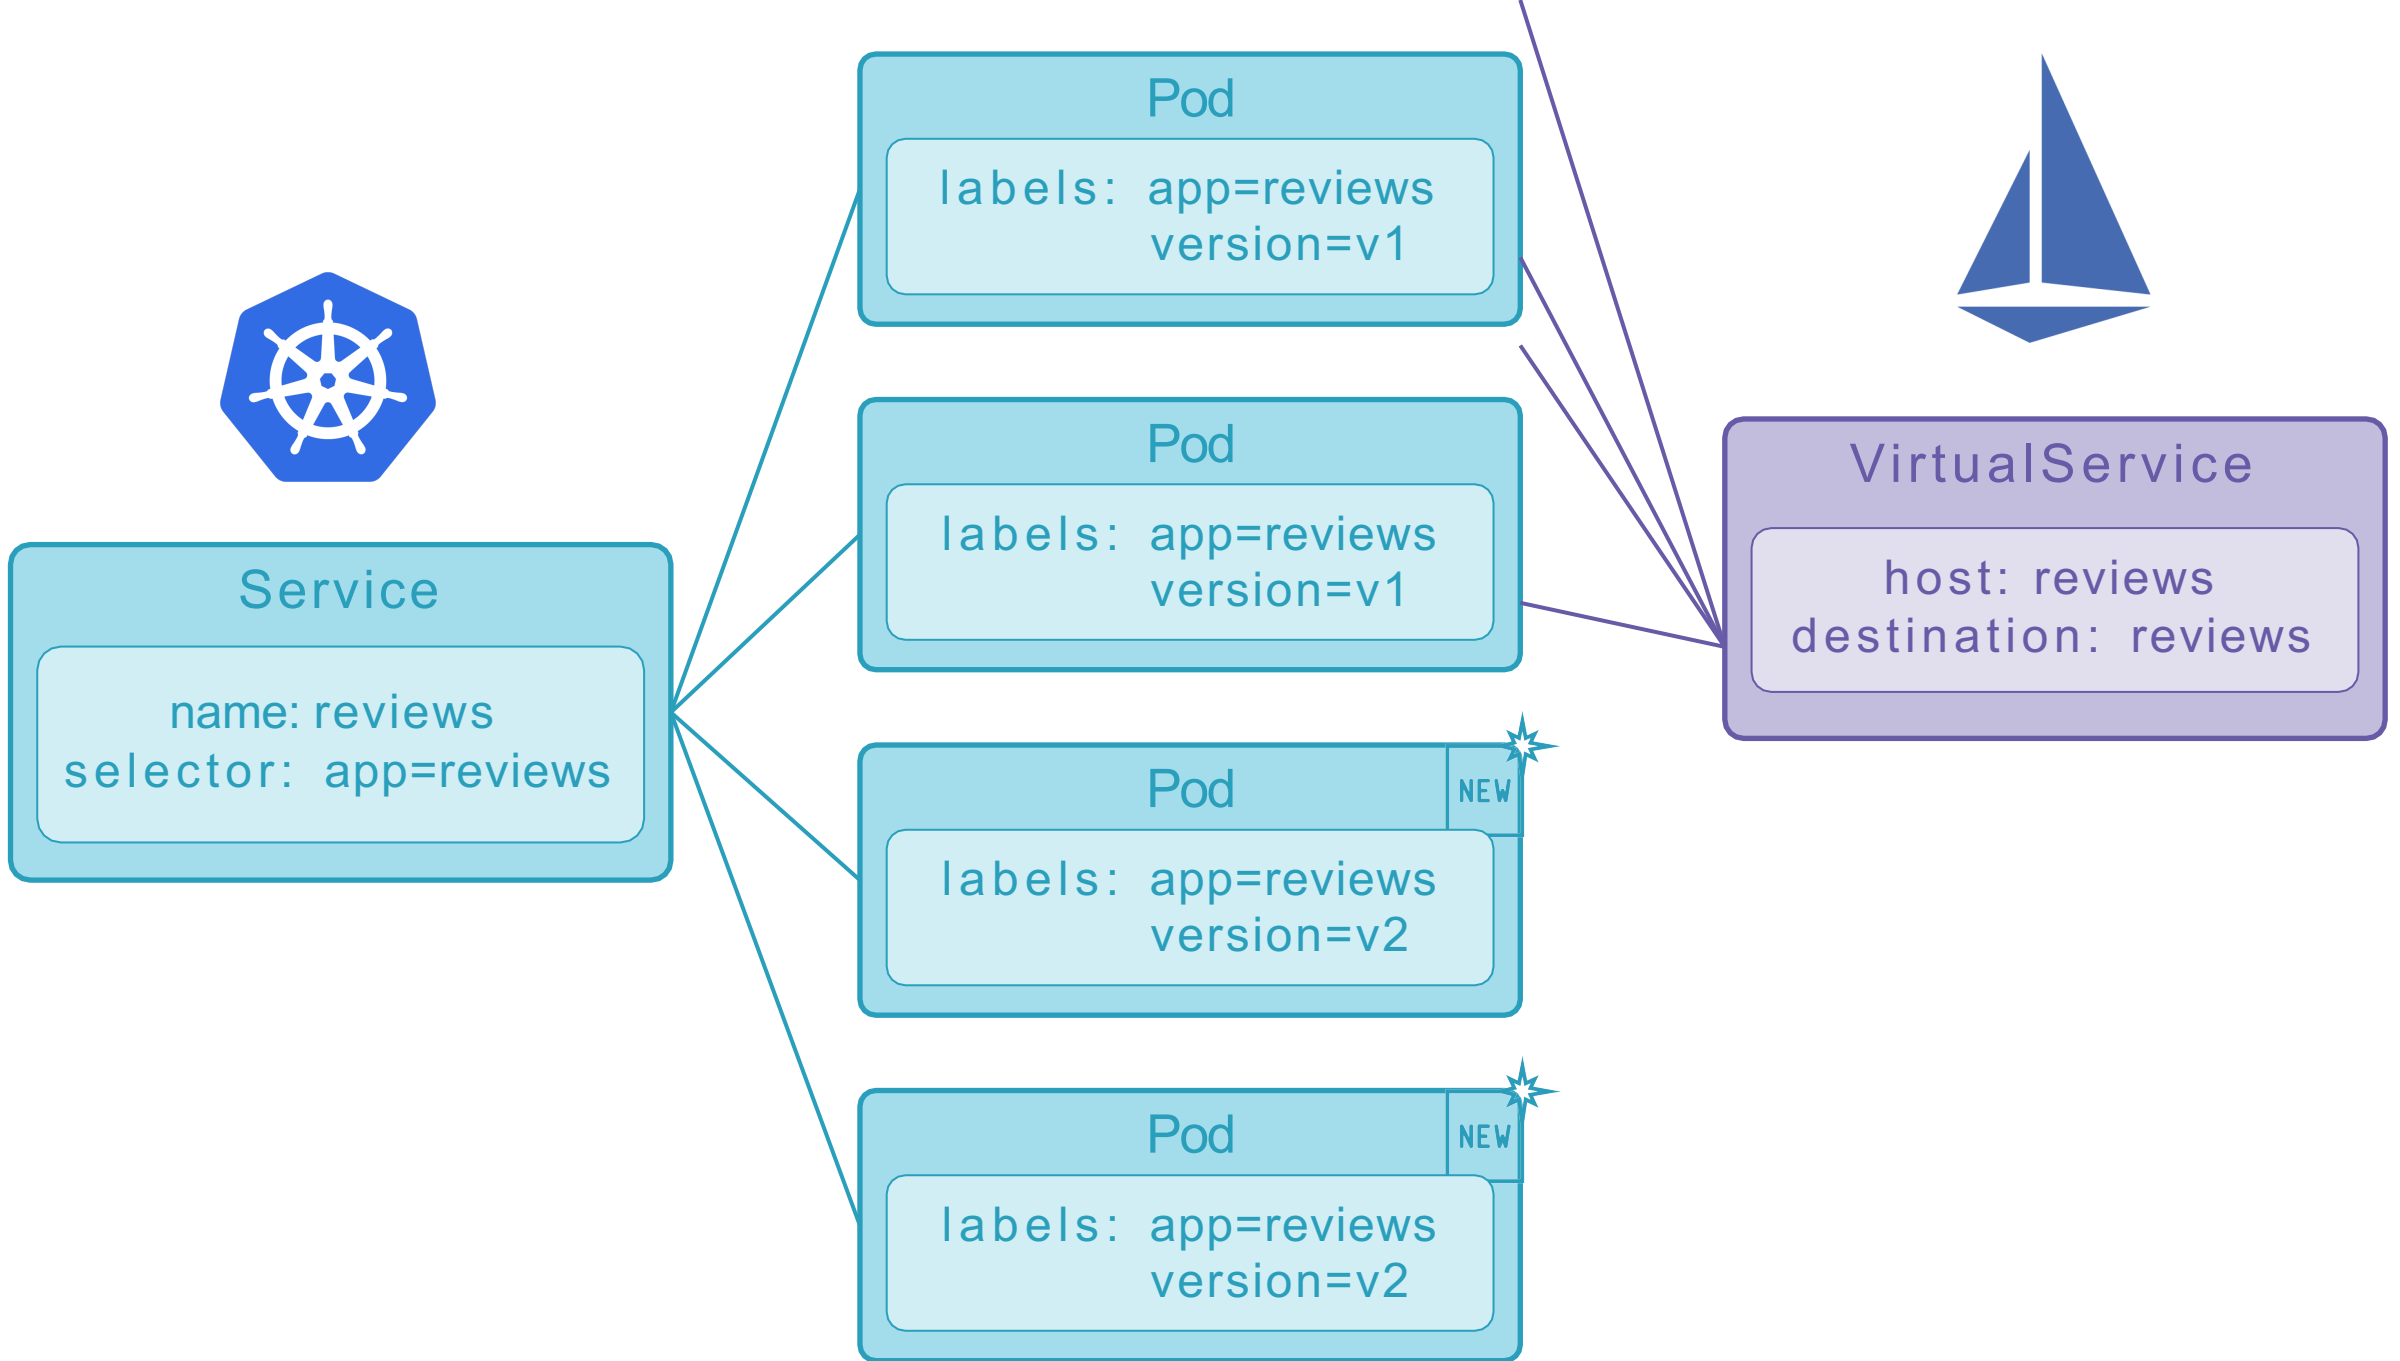

```
      labels:
```

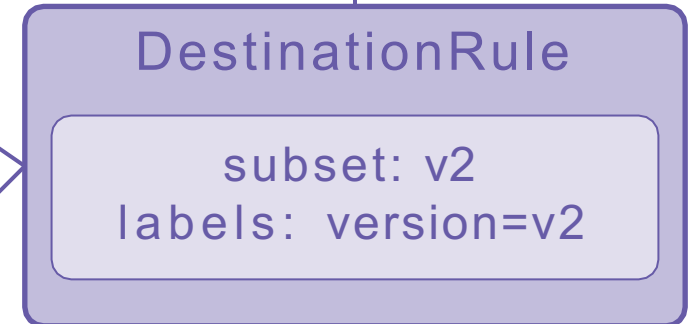

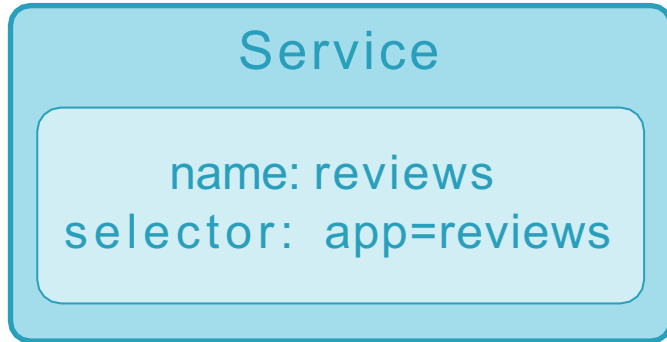

```
        version: v2
```

t The host requested by the client

t Available subsets for routing

t Subsets identify targets by labels

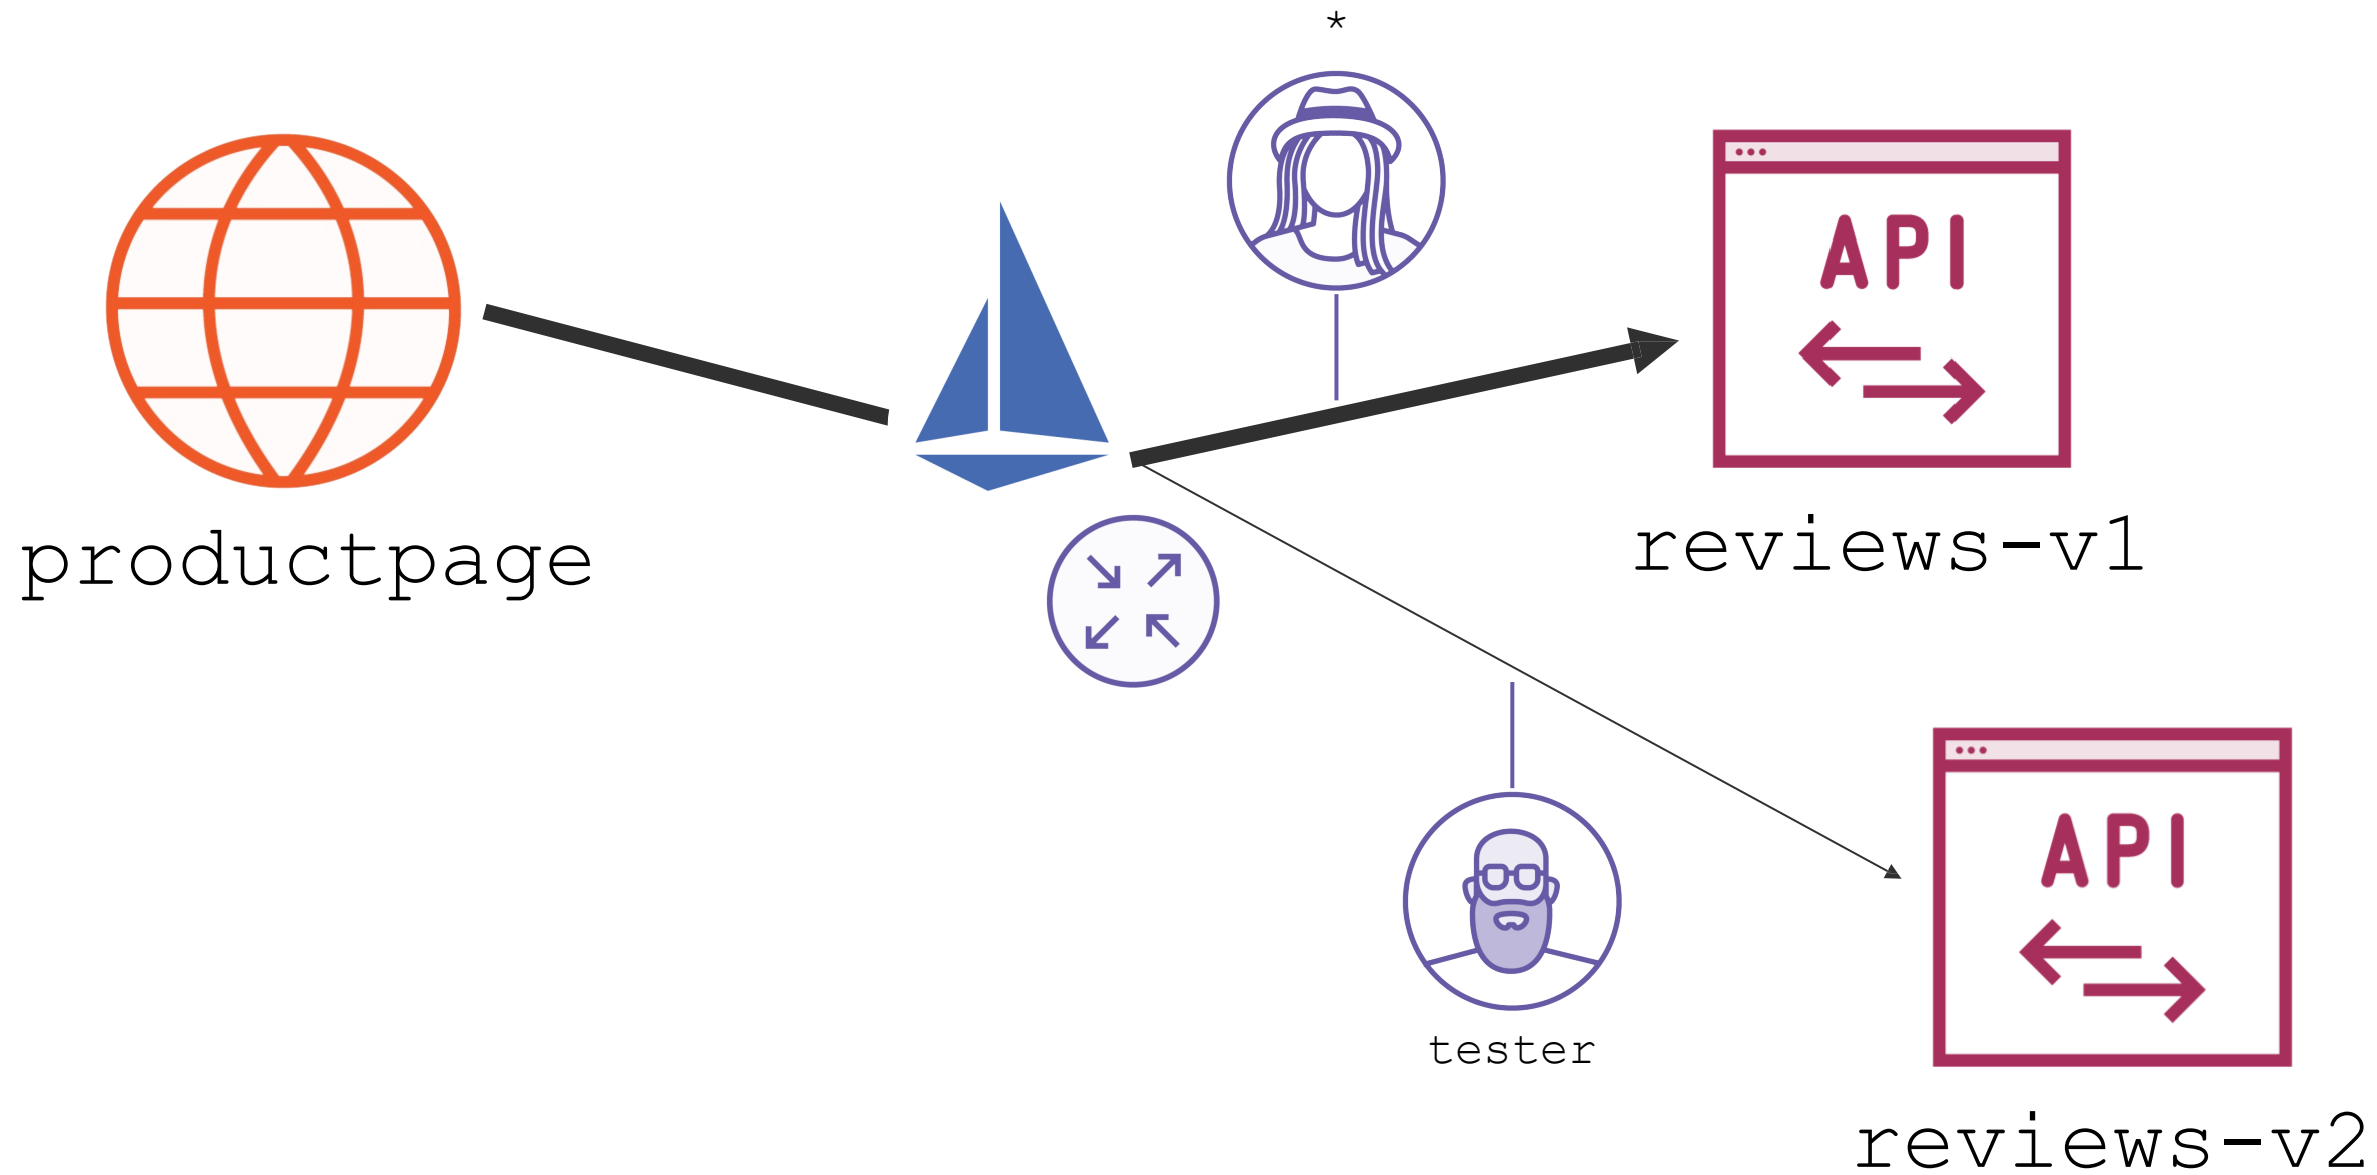

Demo

Dark launch

- End-user routing
- Enable for test user
- Validate fault scenarios

Custom Routing by User

DestinationRule.yaml

```
host: reviews
subsets:
- name: v1
  labels:
    version: v1
- name: v2
  labels:
    version: v2
```

VirtualService.yaml

```
http:
- match:
  - headers:
      end-user:
        exact: tester
  route:
  - destination:
      host: reviews
      subset: v2
```

Delay Injection

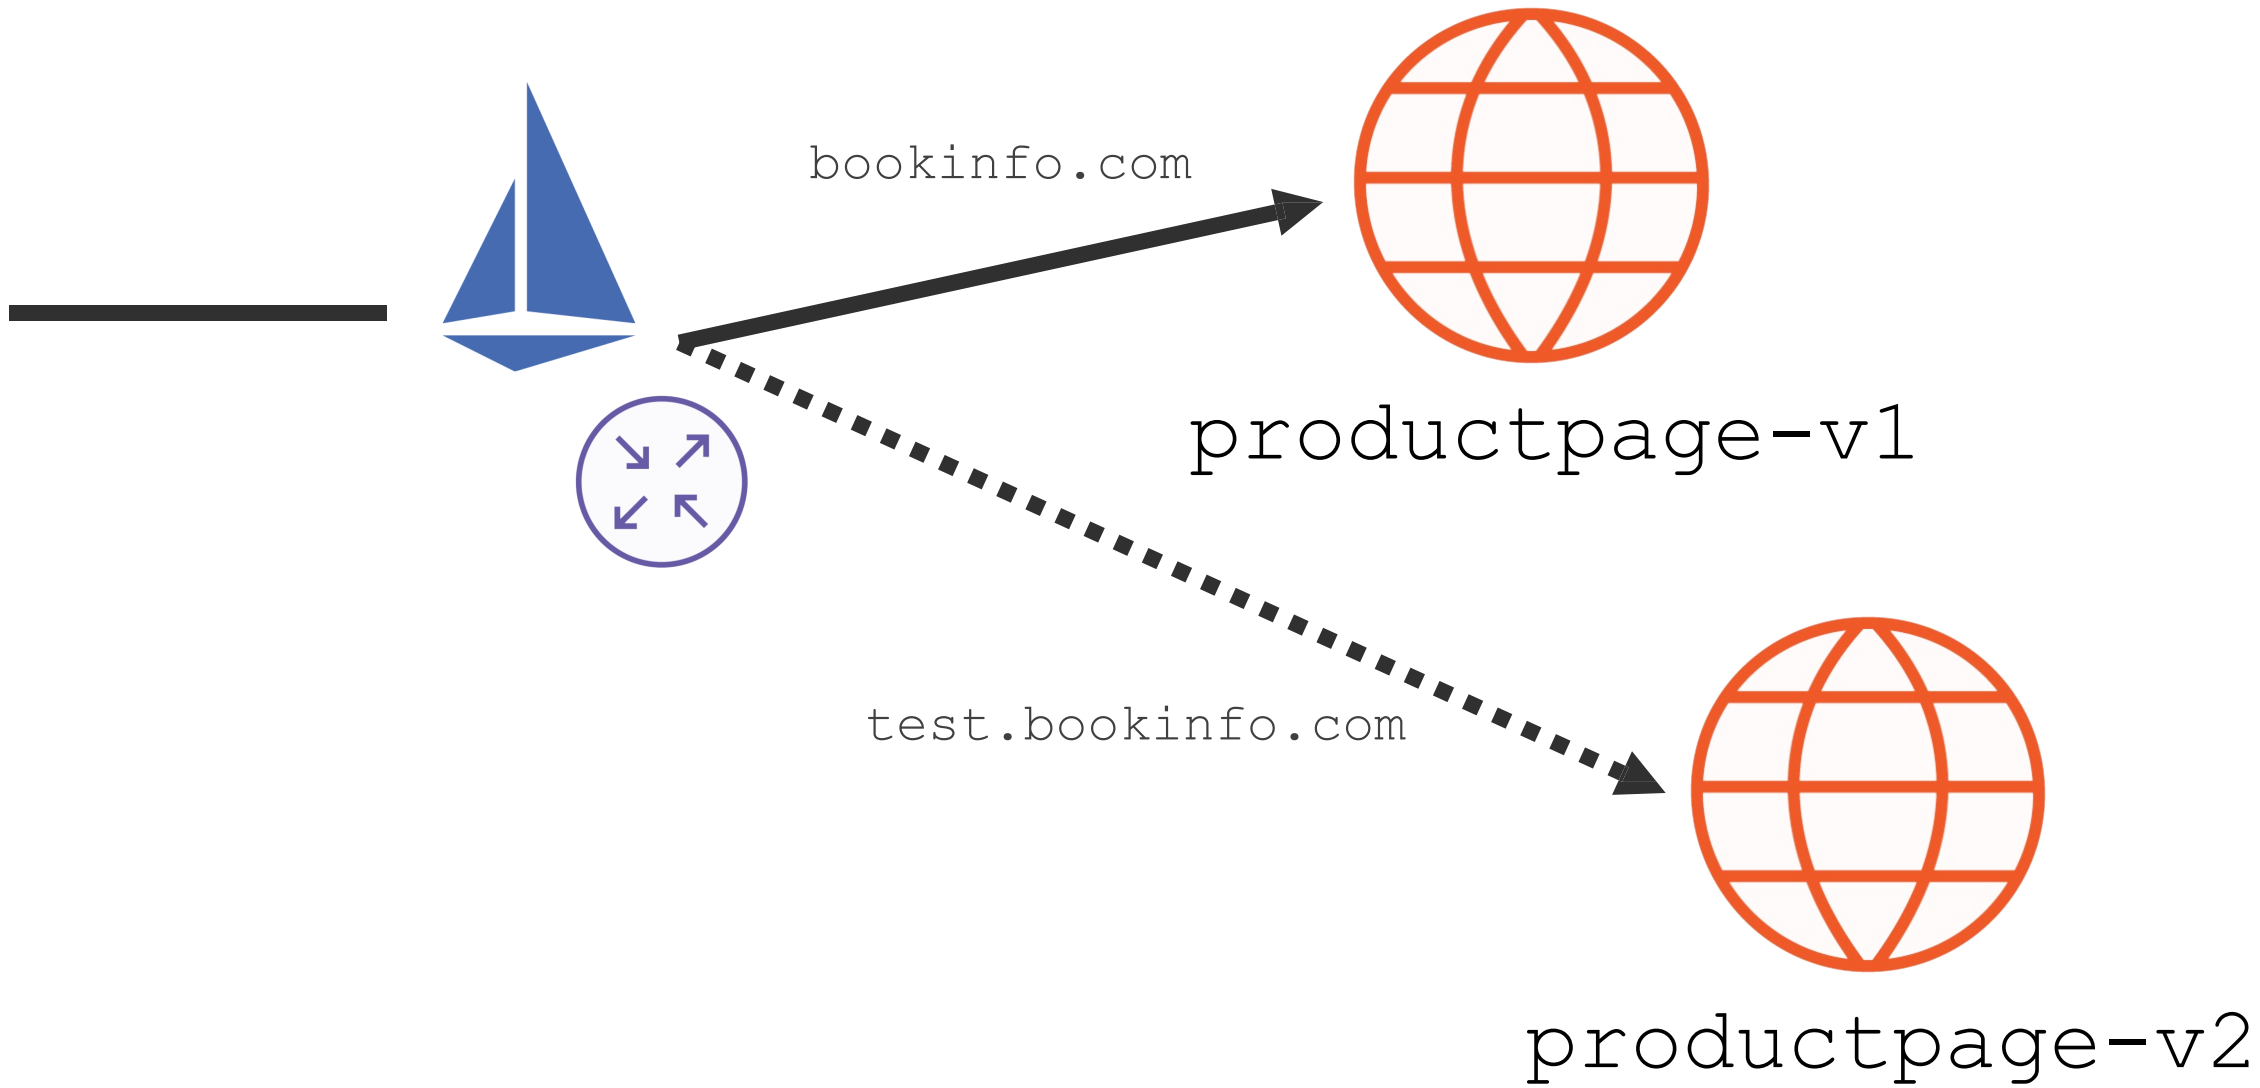

VirtualService.yaml

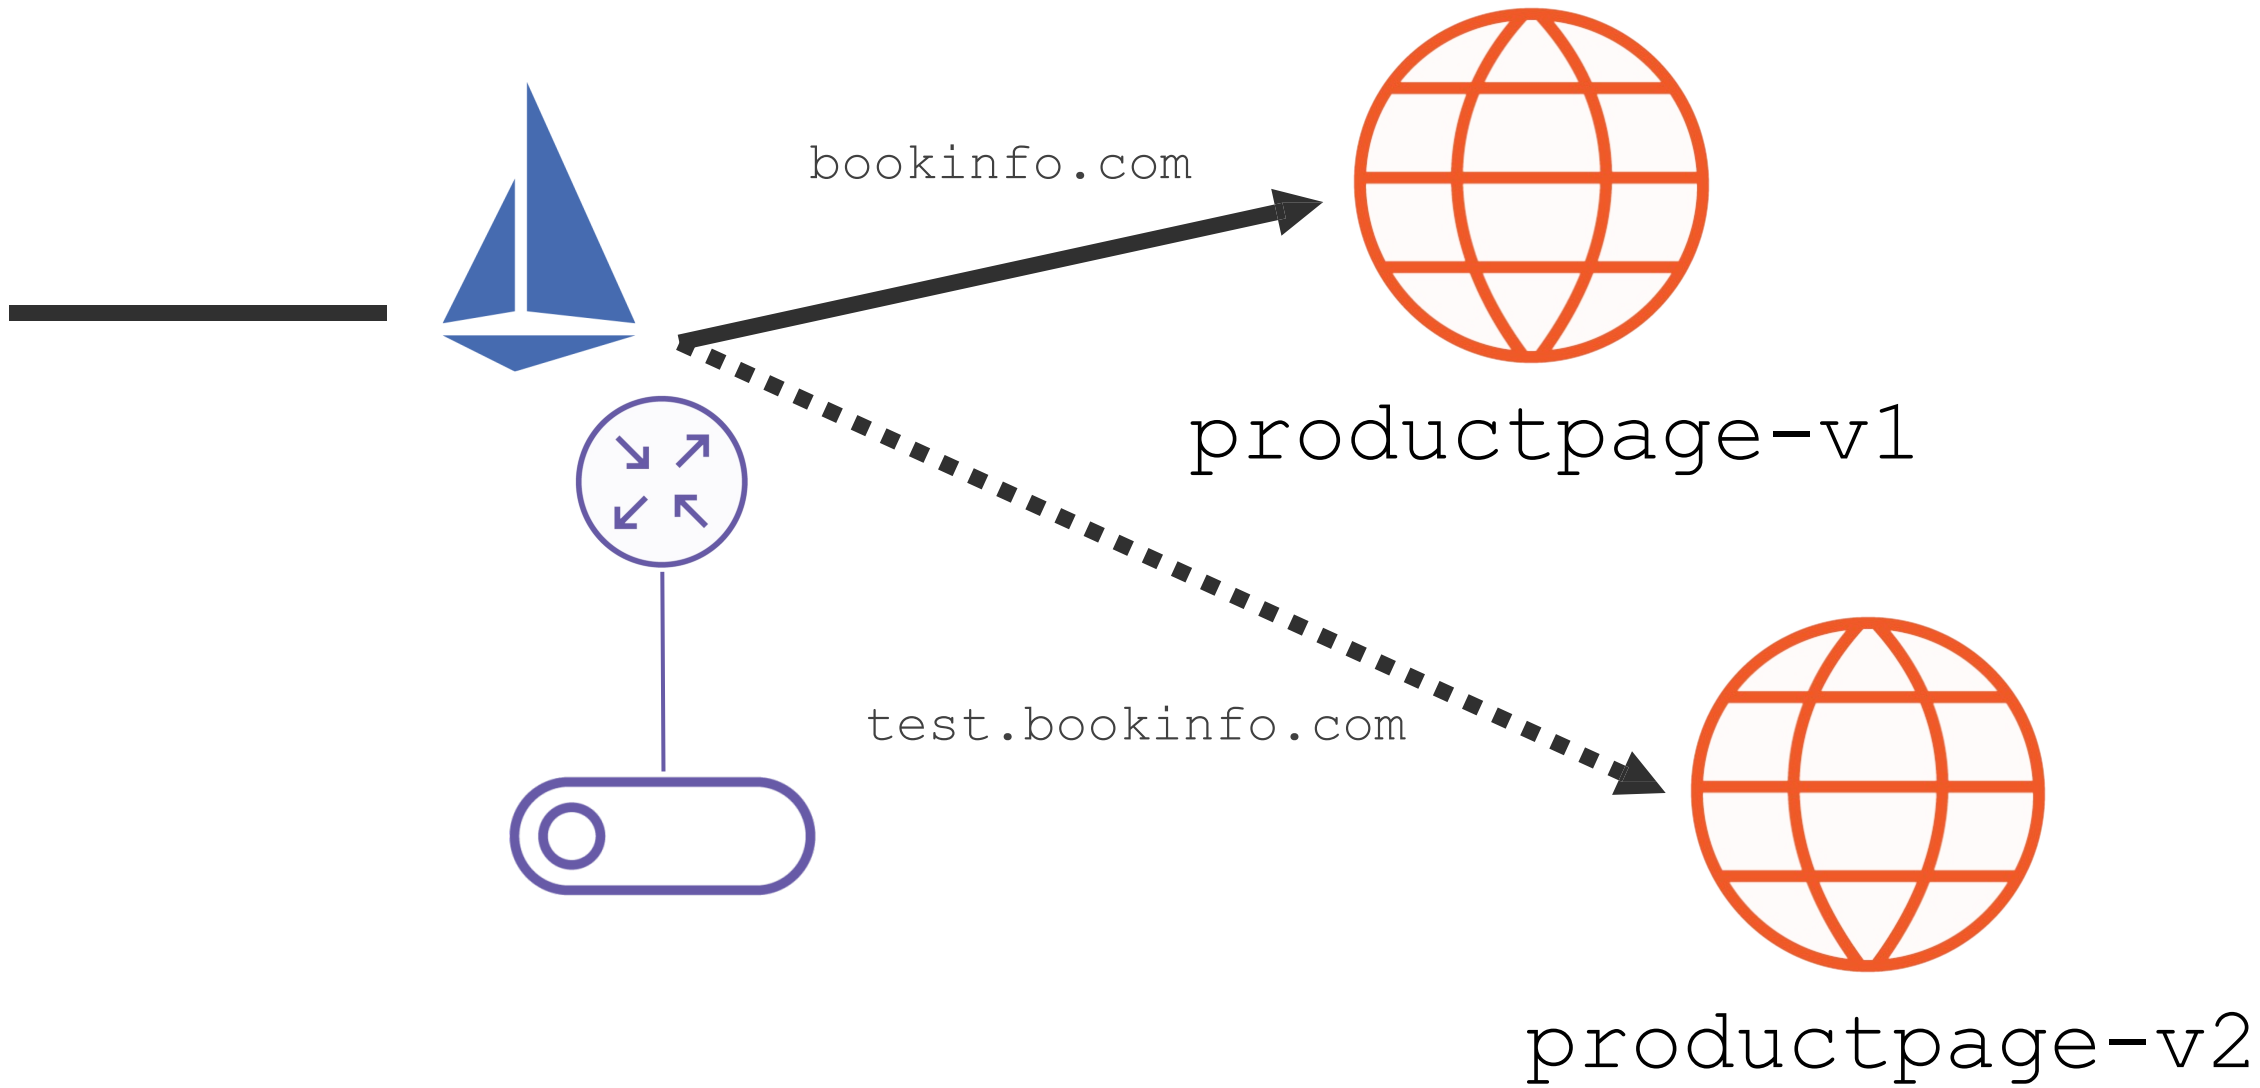

```
http:
- match:
  - headers:
      end-user:
        exact: tester
  fault:
    delay:
      percent: 100
      fixedDelay: 2.5s
  route:
  - destination:
      host: reviews
      subset: v2
- route:
  - destination:
      host: reviews
      subset: v1
```

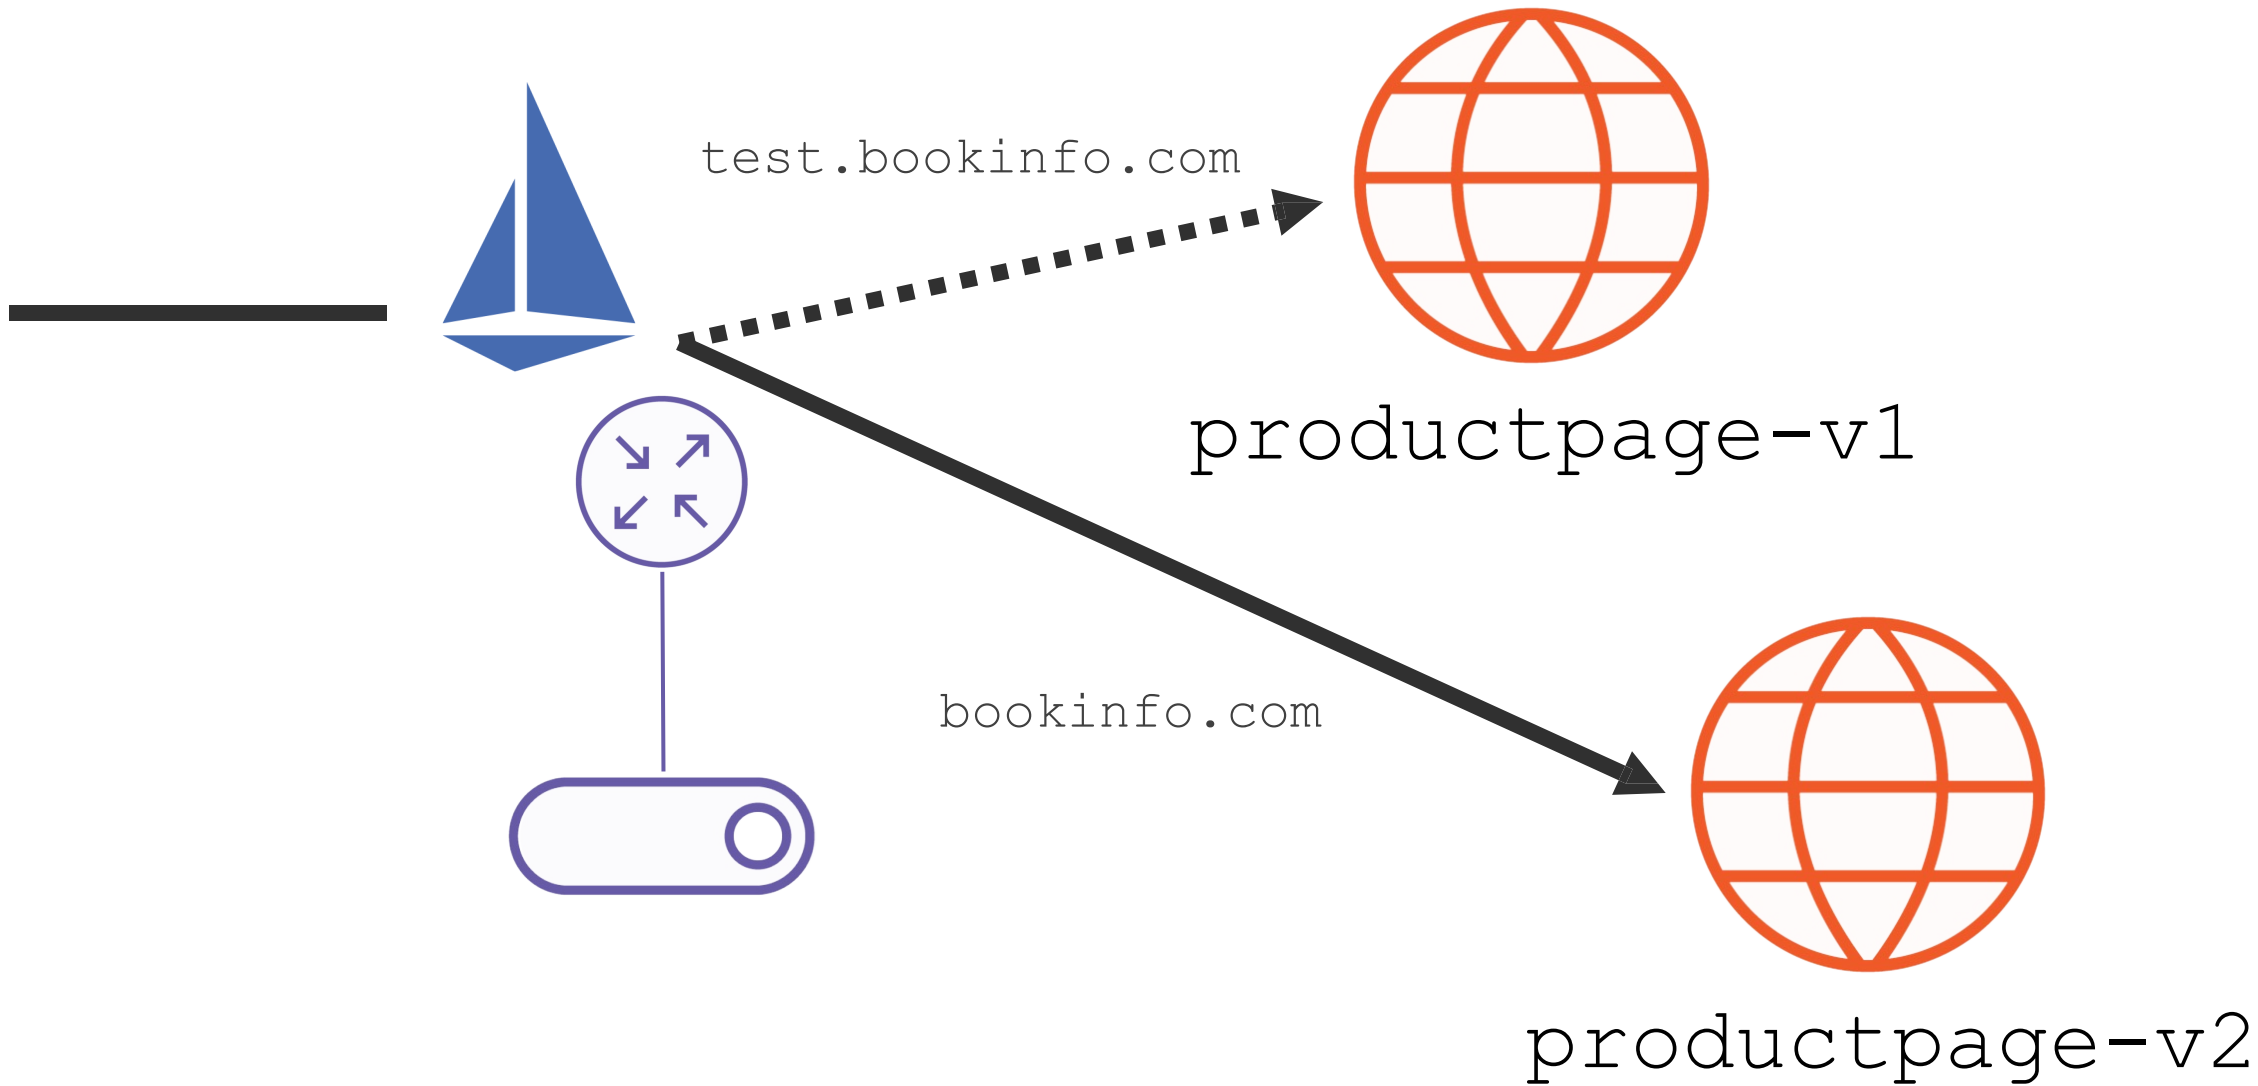

Fault Injection

VirtualService.yaml

```
http:
- match:
  - headers:
      end-user:
        exact: tester
  fault:
    abort:
      percent: 50
      httpStatus: 503
  route:
  - destination:
      host: reviews
      subset: v2
- route:
  - destination:
      host: reviews
      subset: v1
```

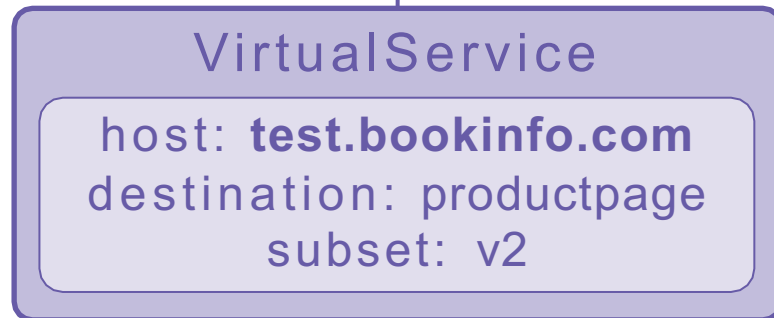

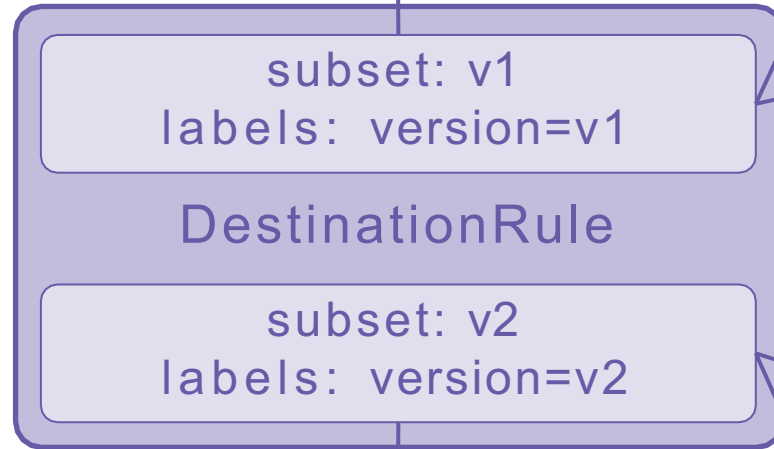

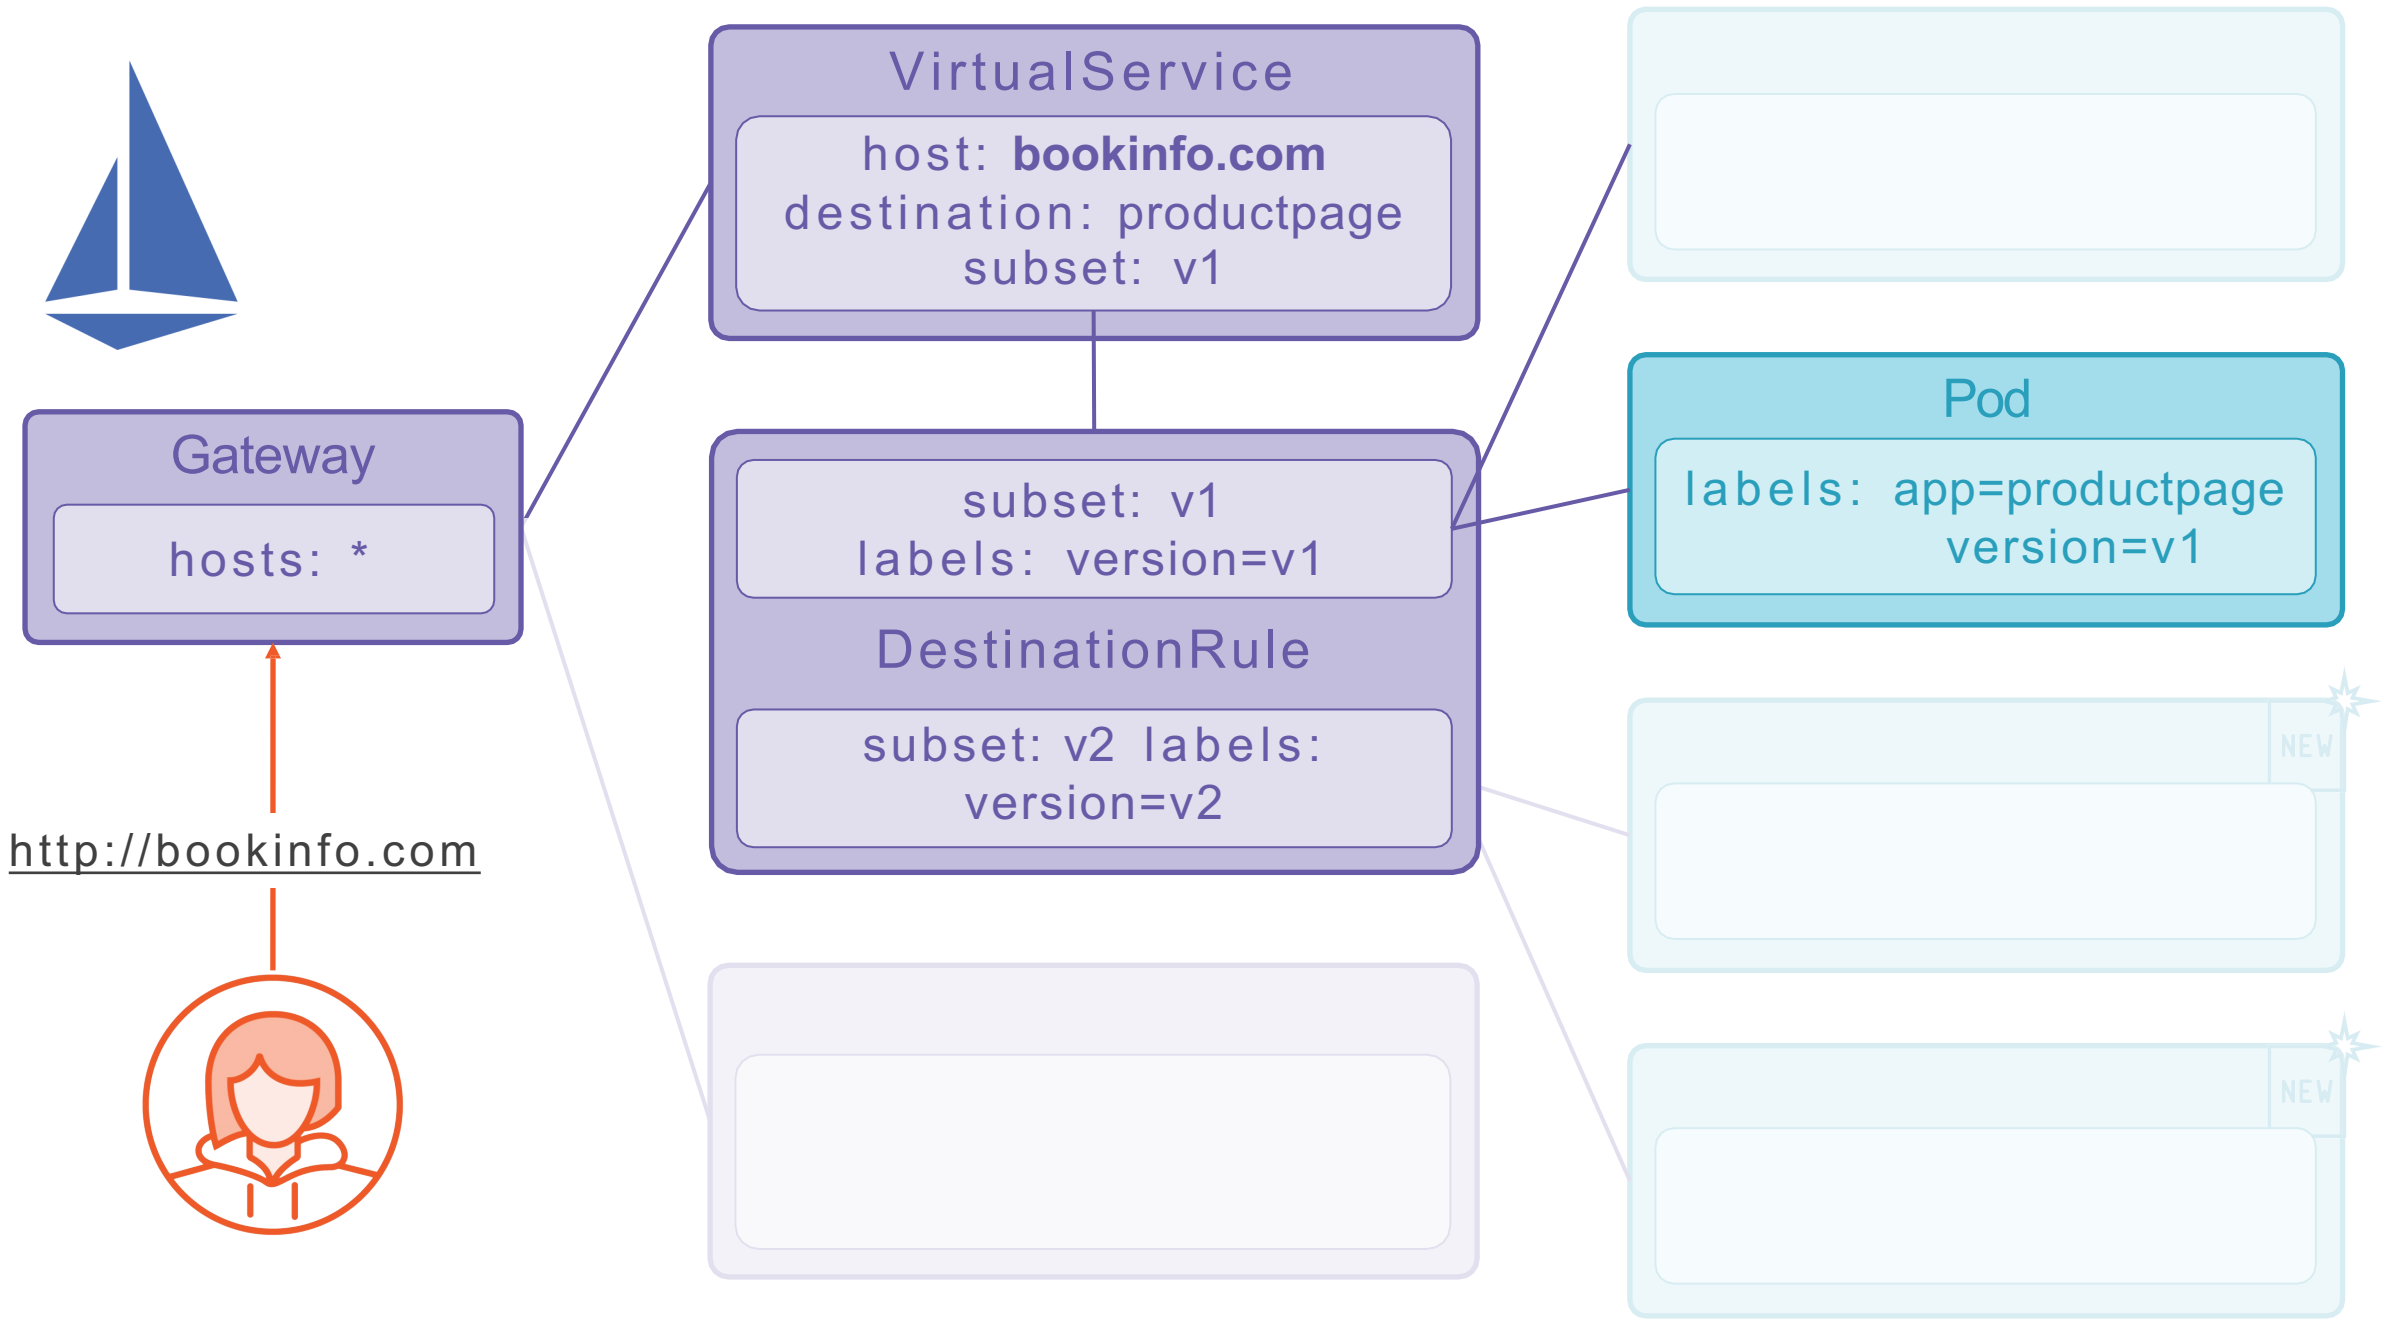

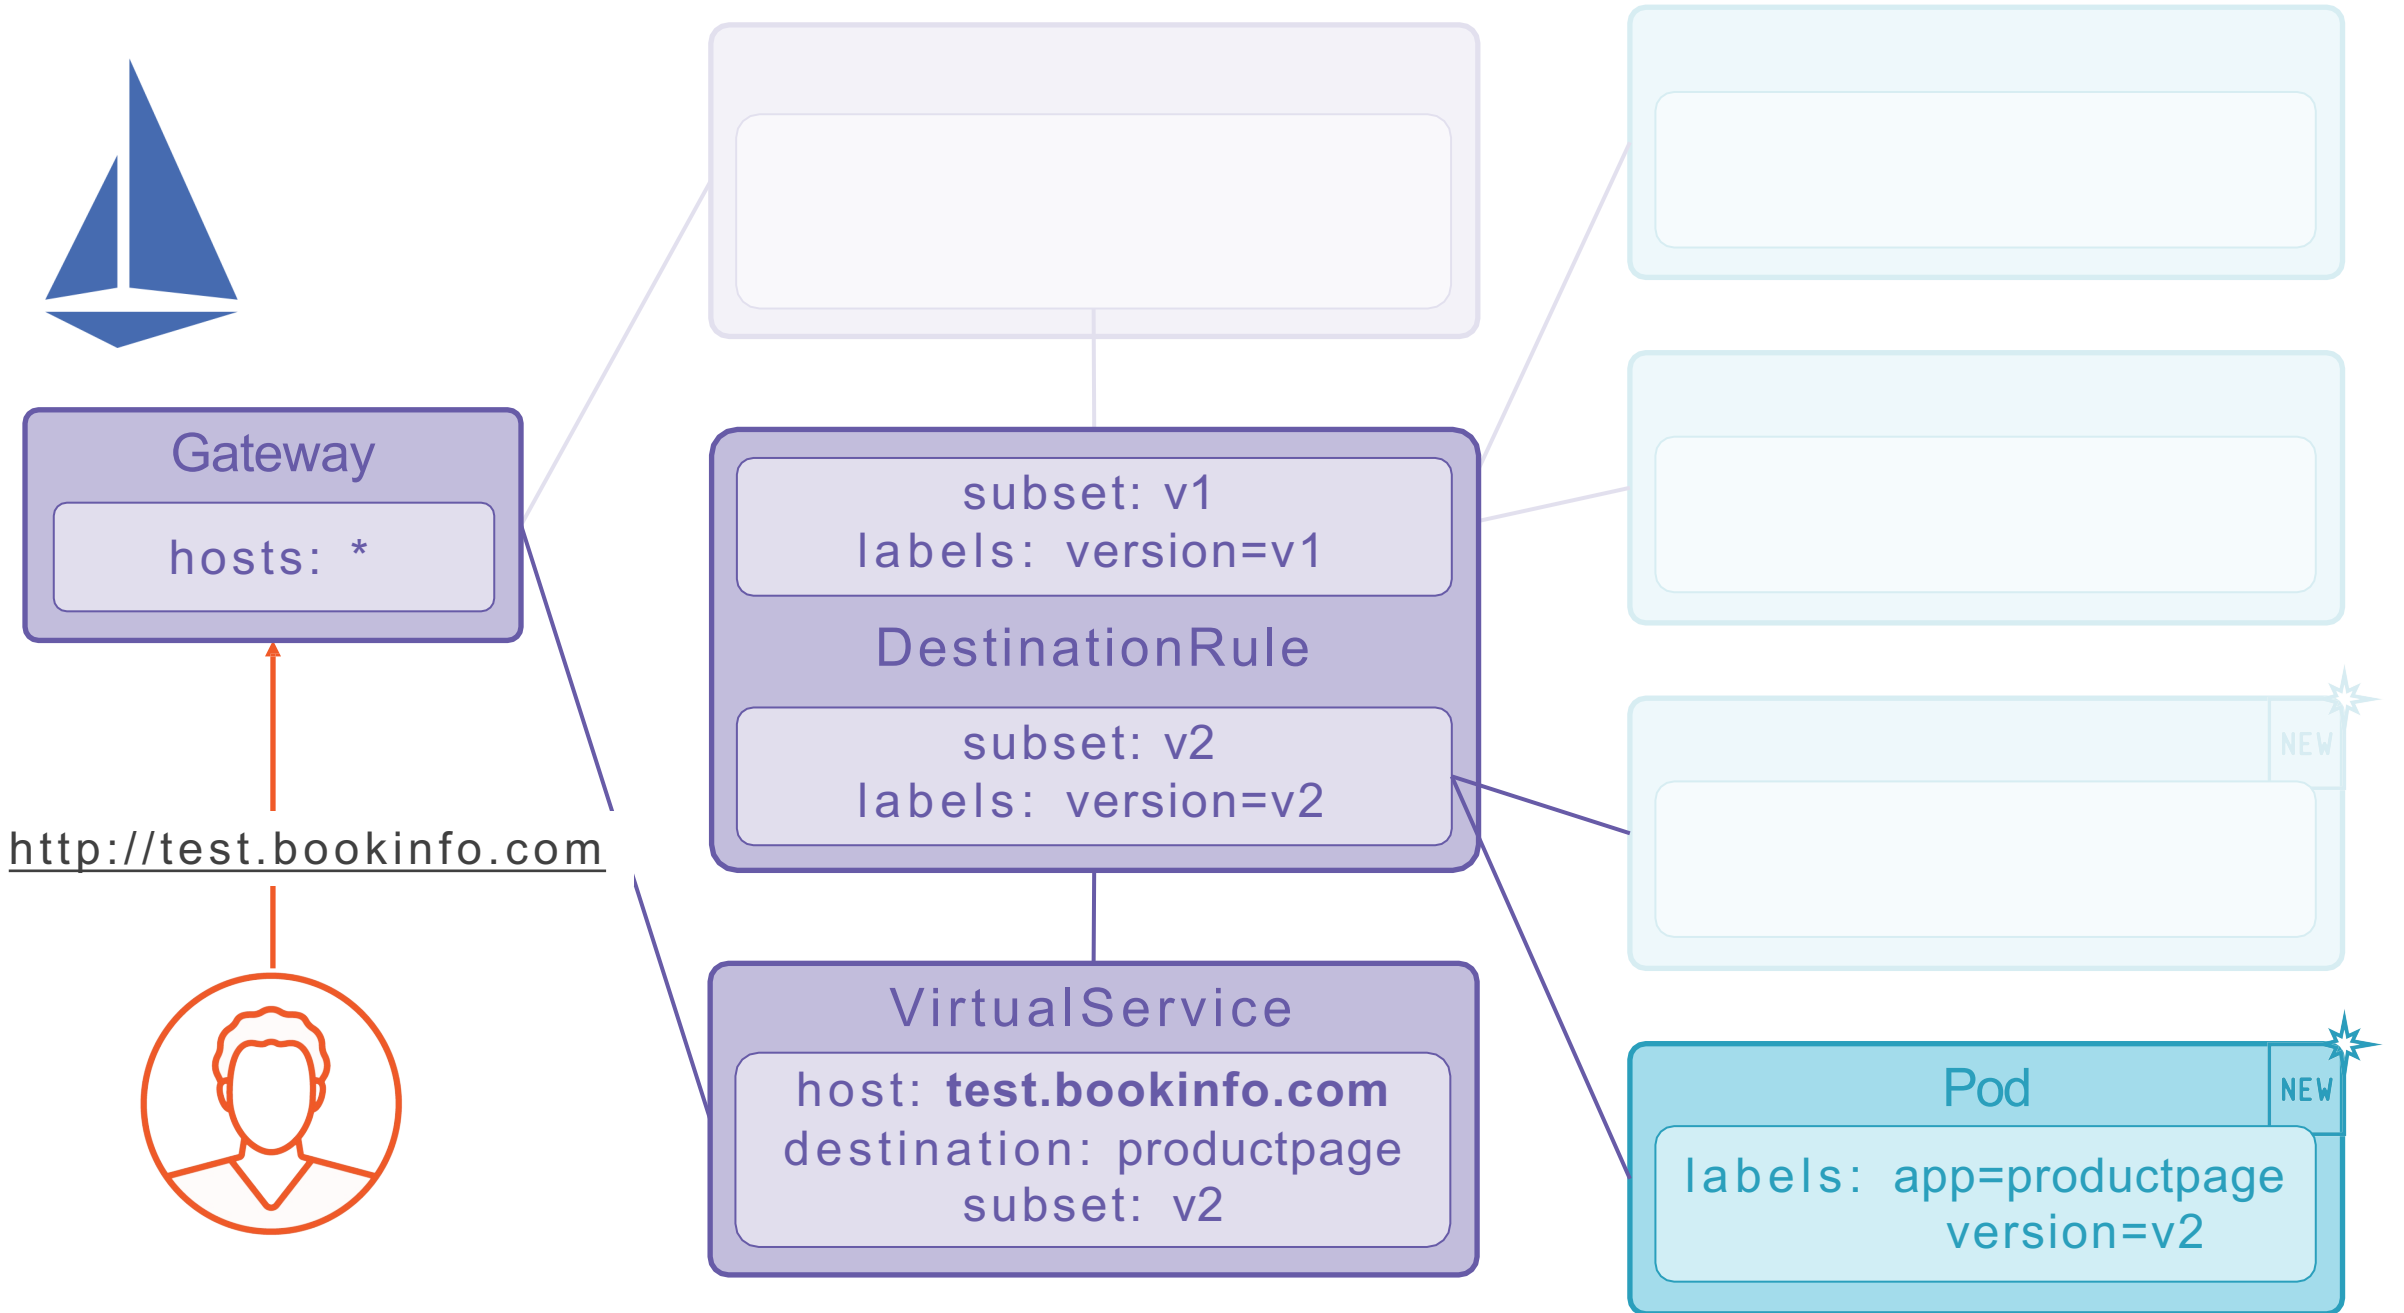

productpage

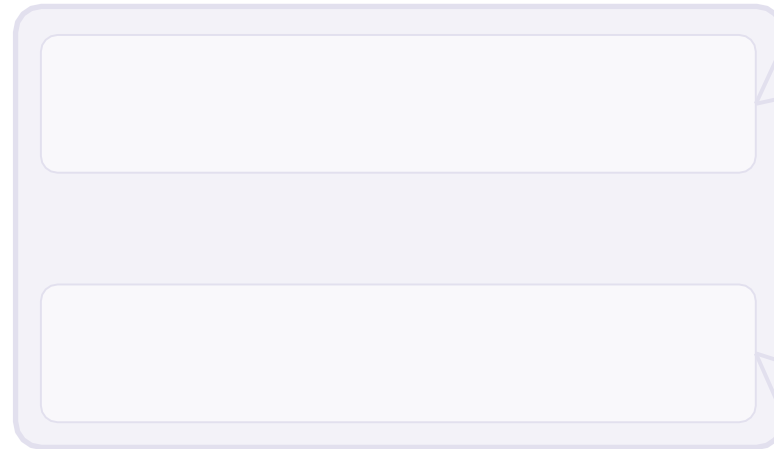

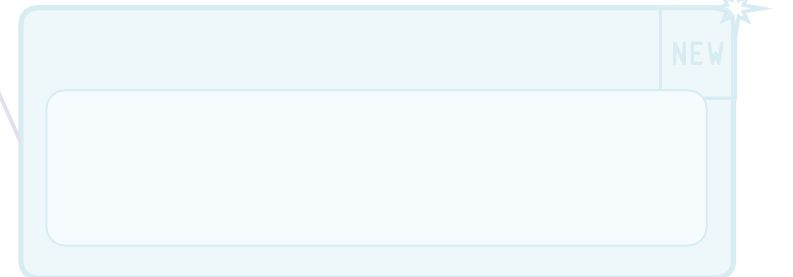

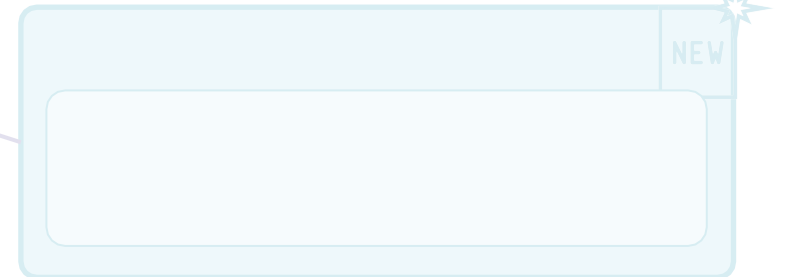

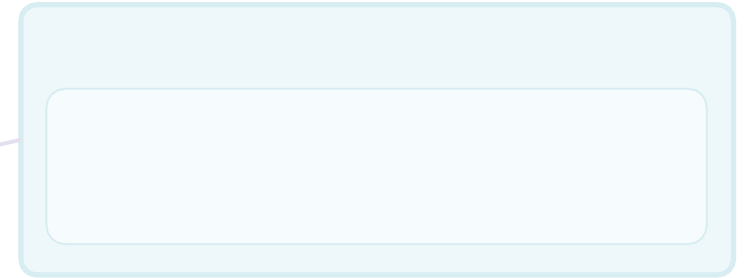

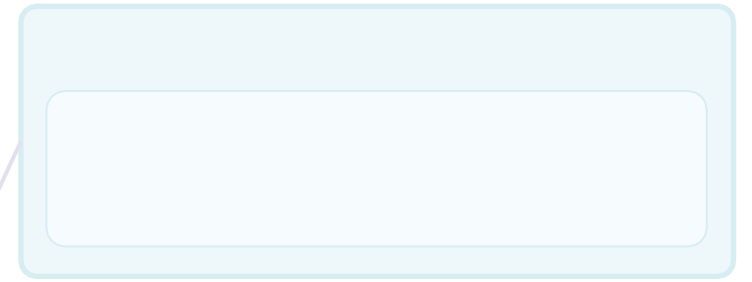

VirtualService

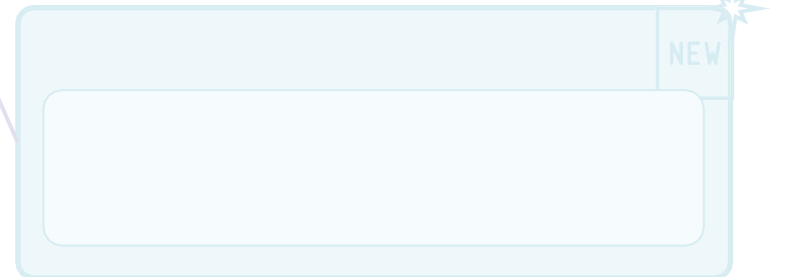

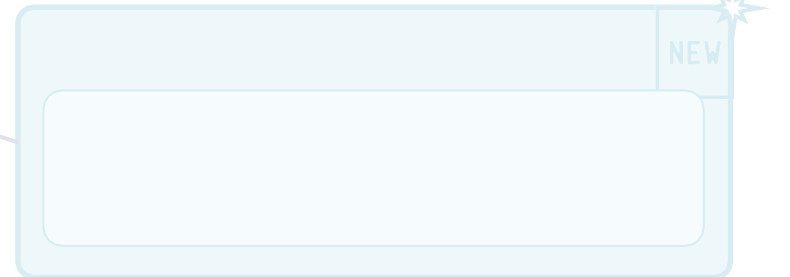

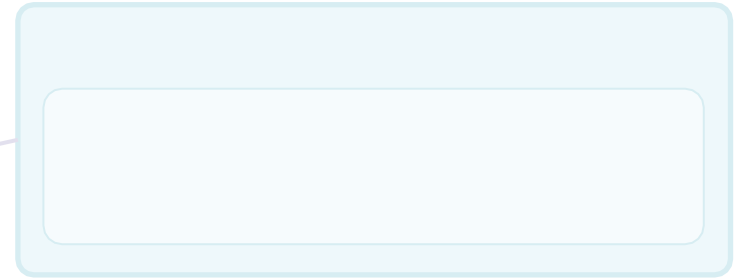

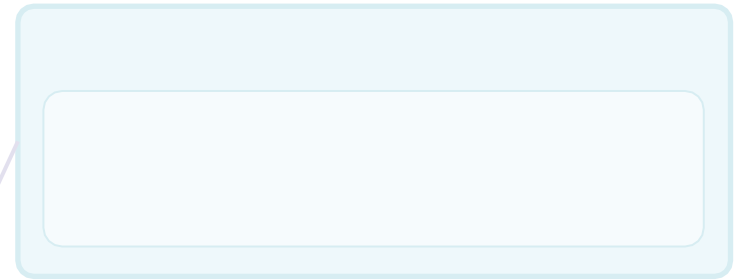

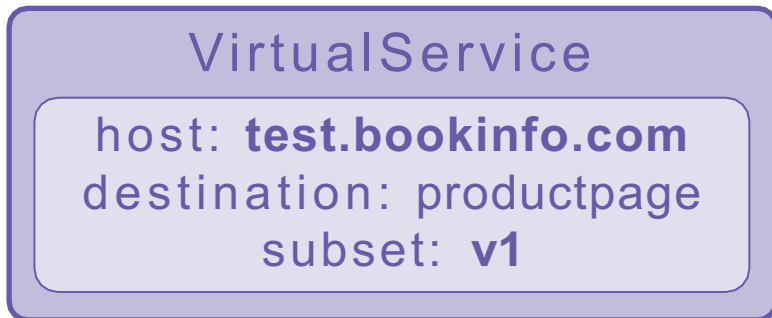

host: **bookinfo.com**
destination: productpage
subset: **v1**

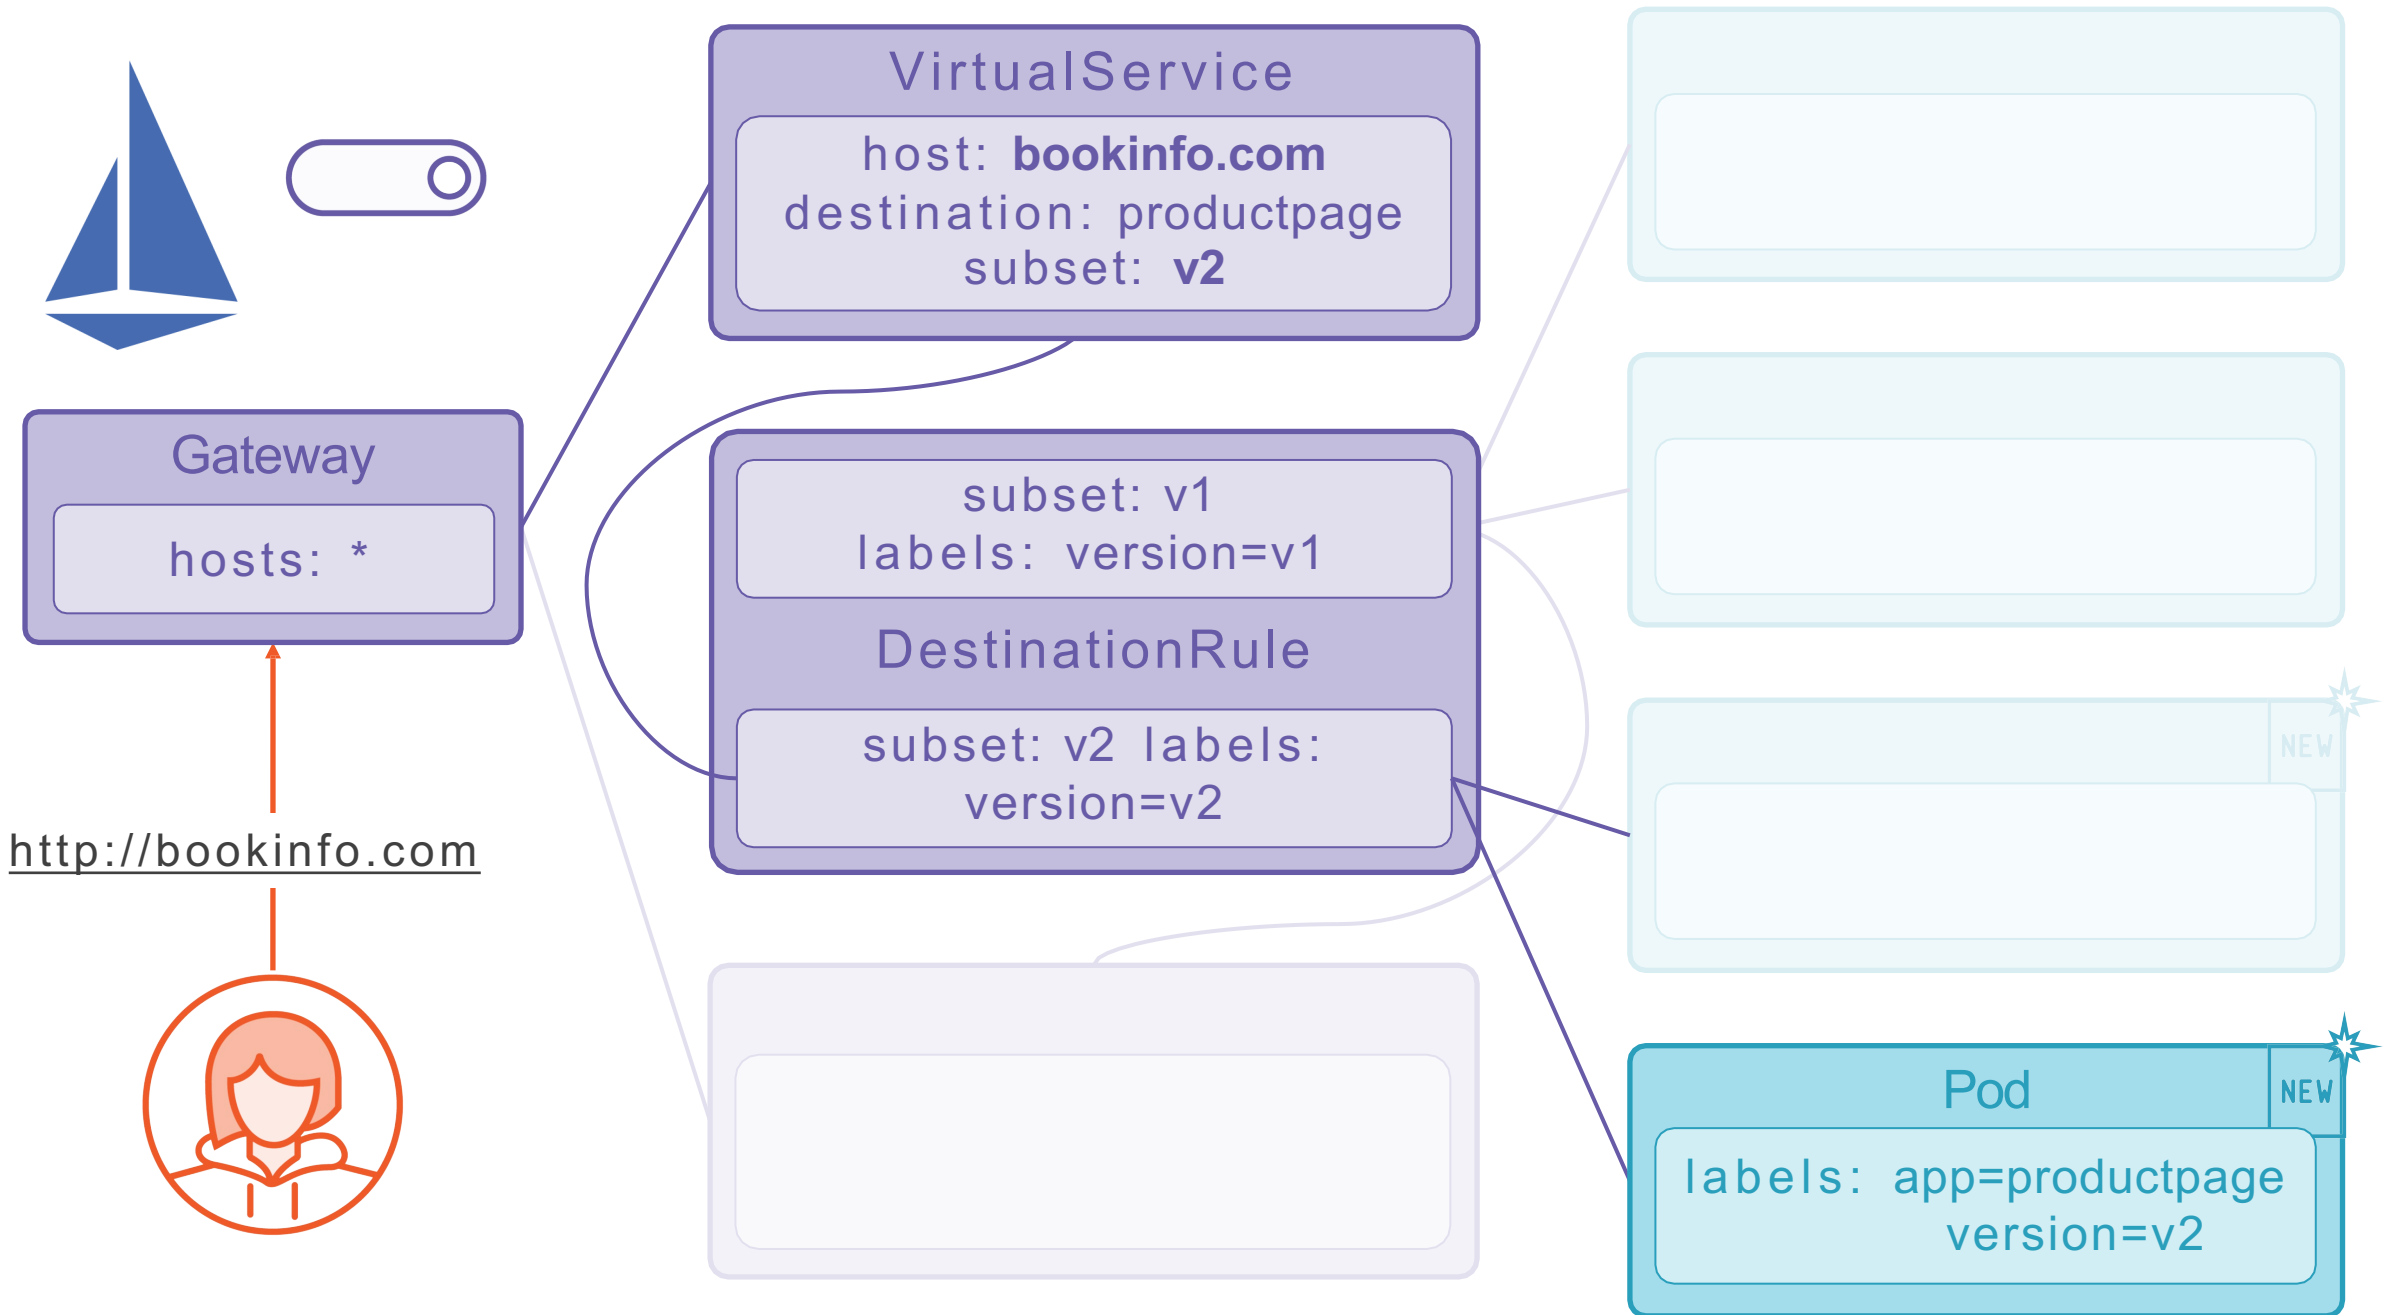

VirtualService

host: **test.bookinfo.com**
destination: productpage
subset: **v2**

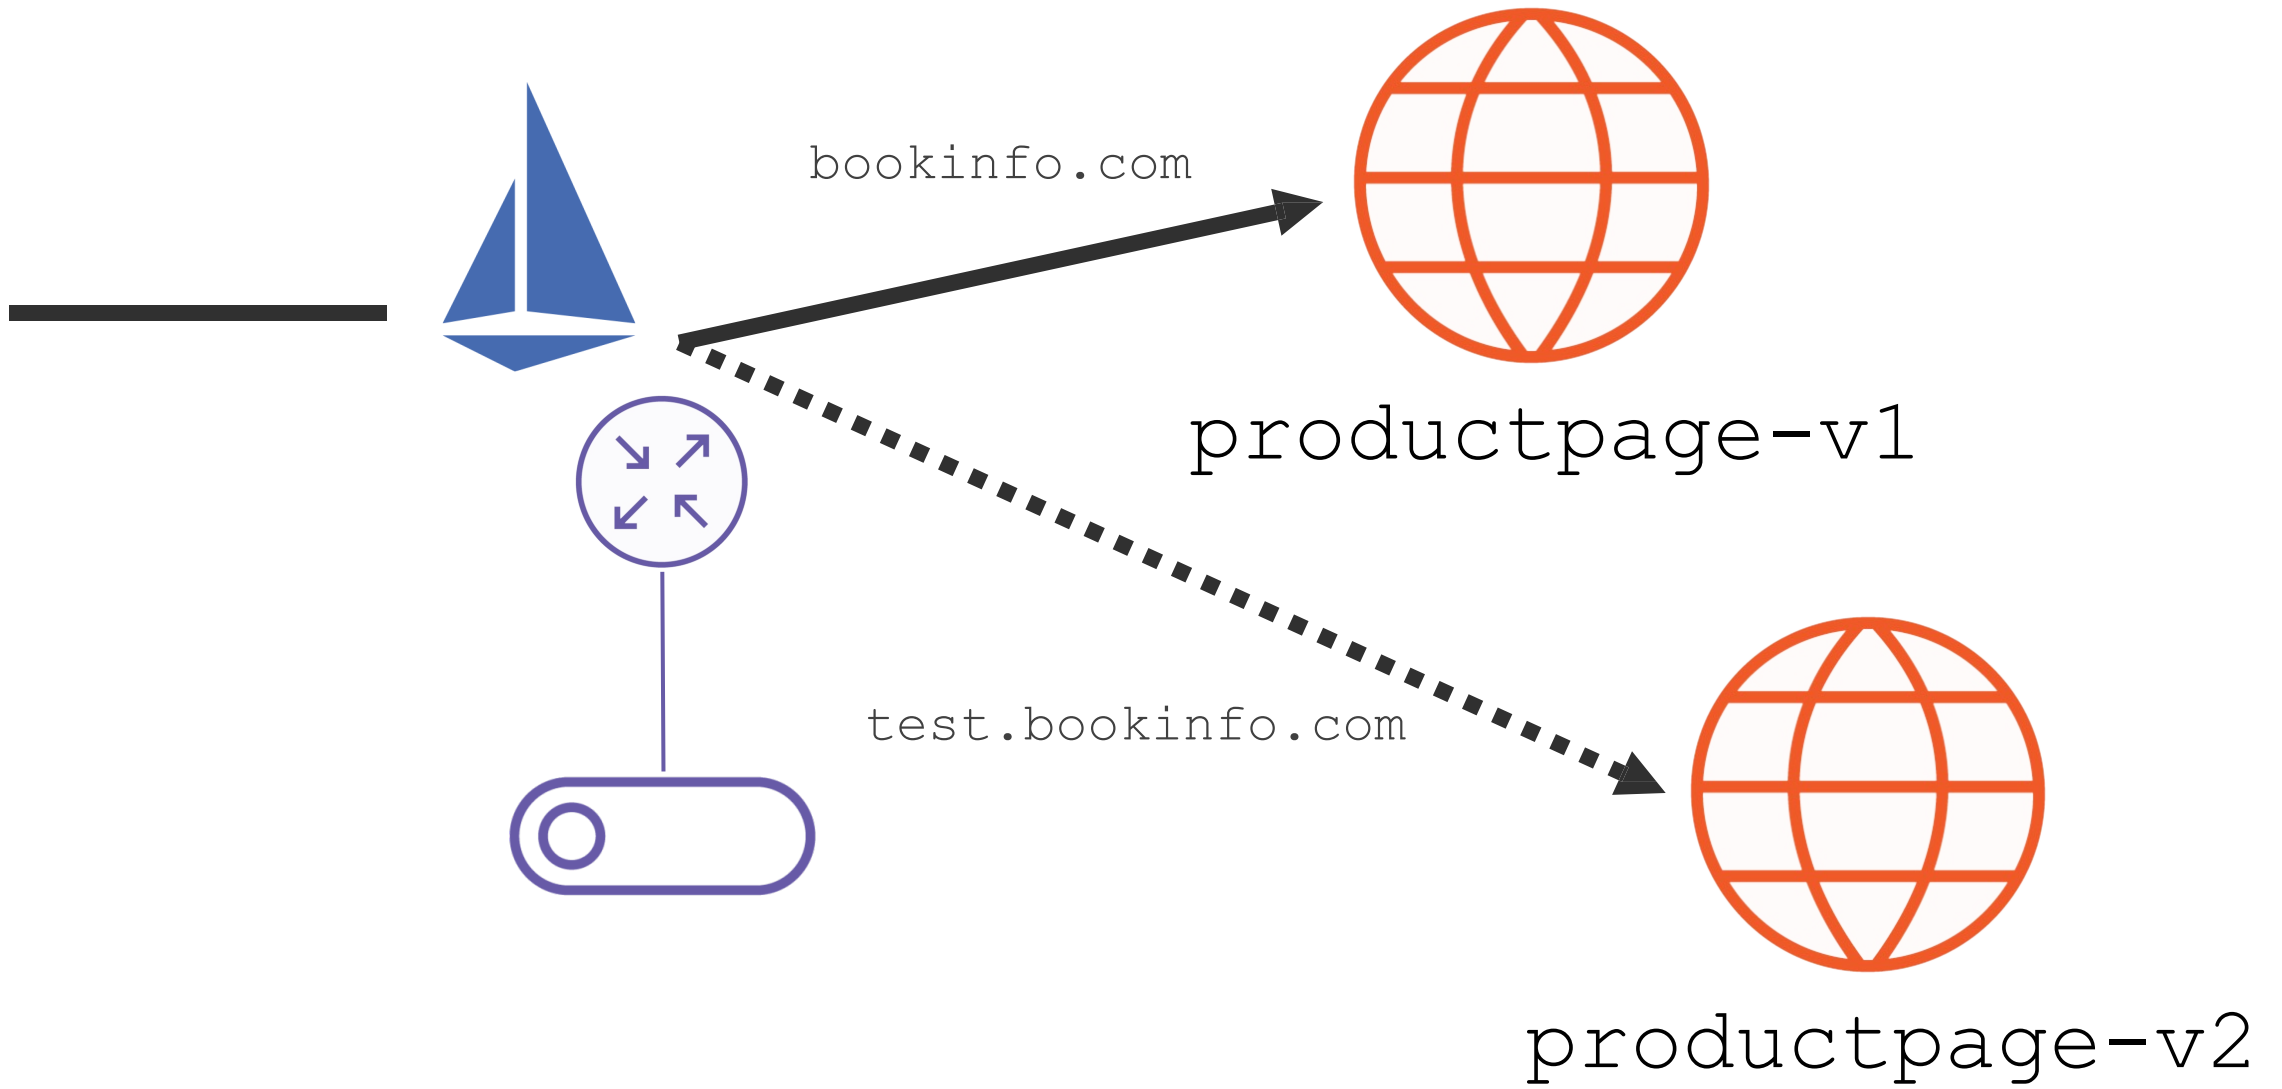

Demo

Blue/green deployment

- Live and test domains
- Switch from test to live
- And back again

Blue/Green Deployments

VirtualService-Live.yaml

```
hosts:
- bookinfo.local
gateways:
- bookinfo-gateway
http:
  - route:
      - destination:
          host: productpage
          subset: v1
```

VirtualService-Test.yaml

```
hosts:
- test.bookinfo.local
gateways:
- bookinfo-gateway
http:
  - route:
      - destination:
          host: productpage
          subset: v2
```

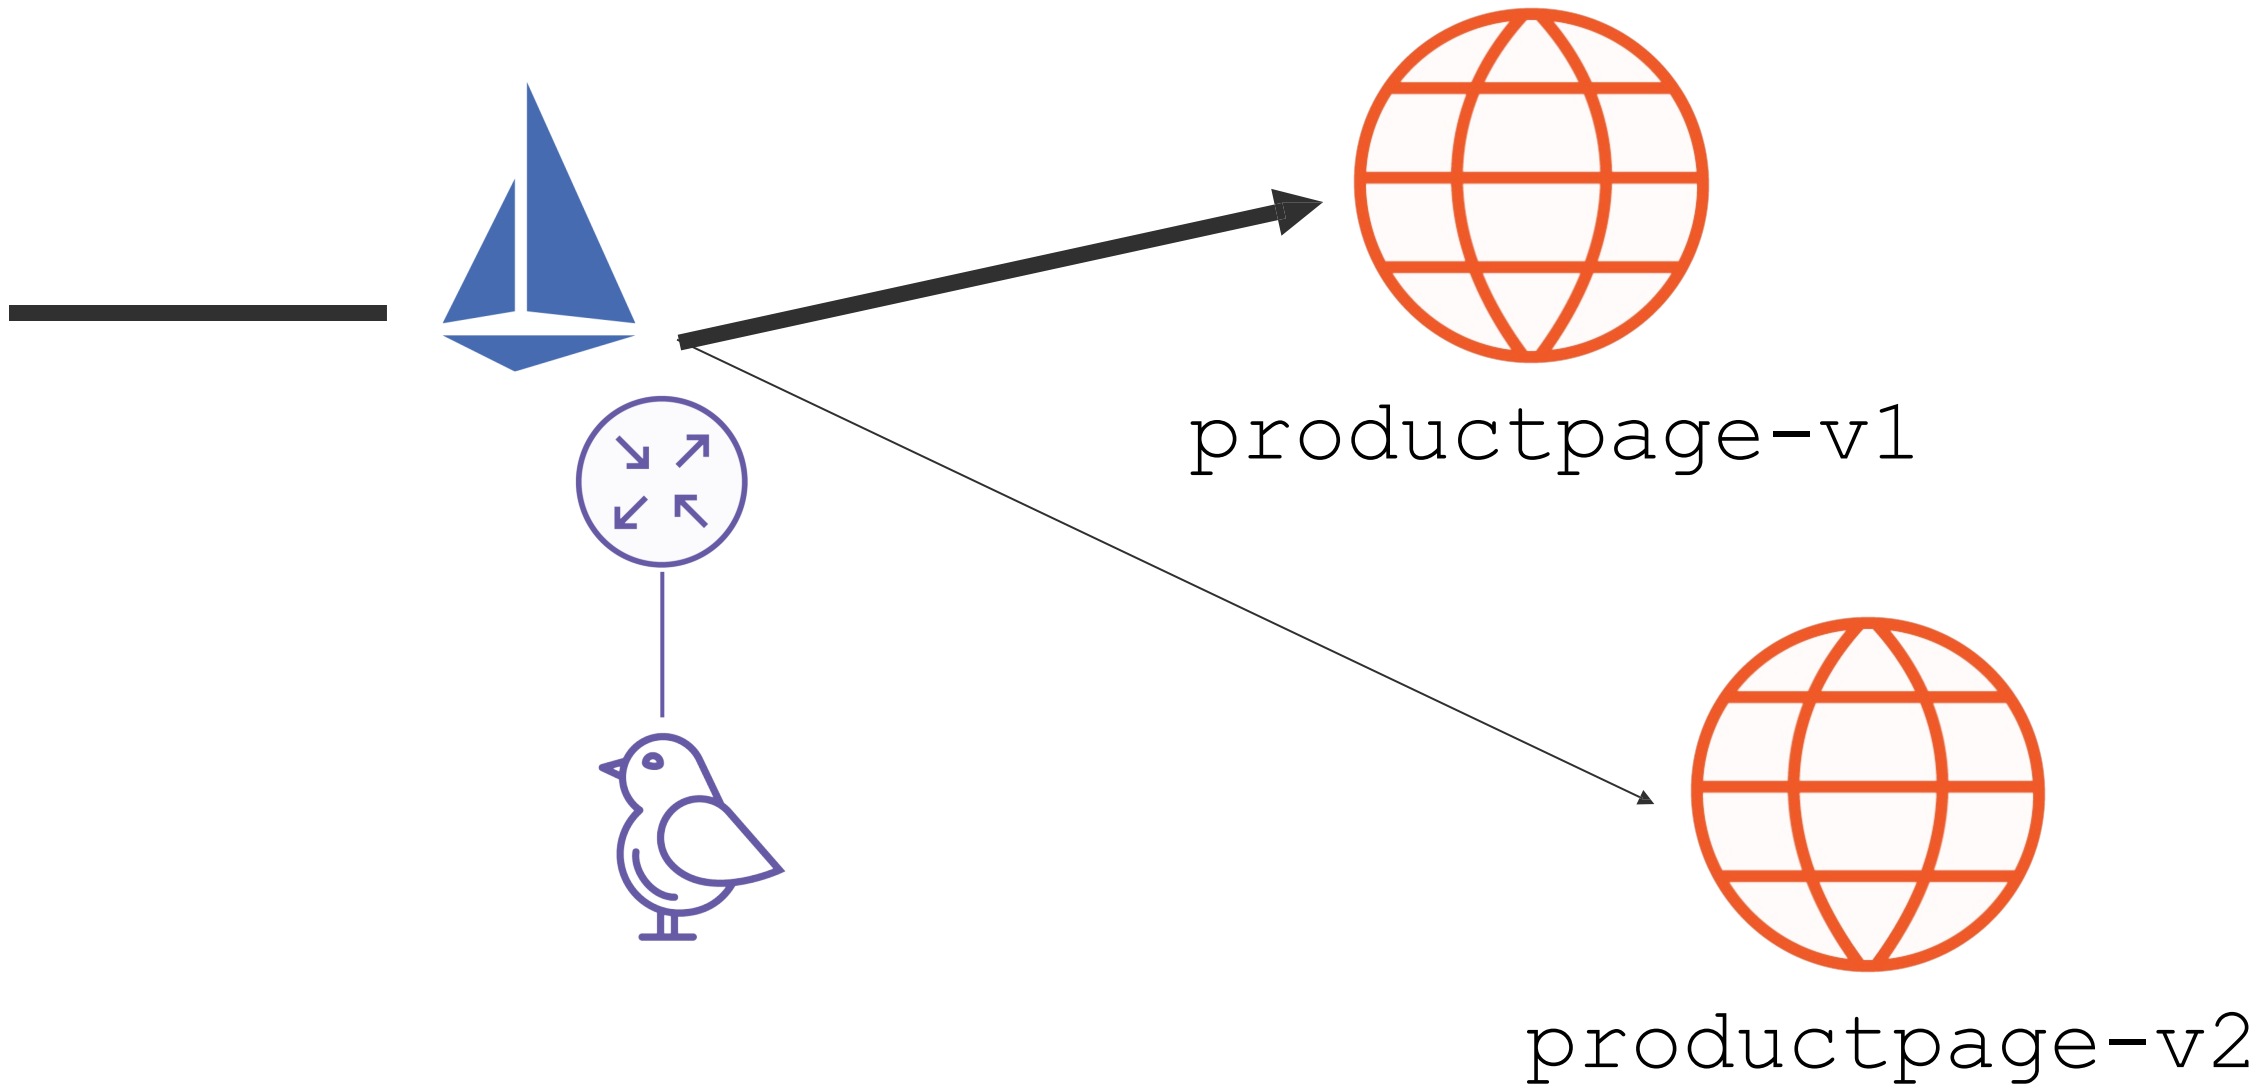

Blue/Green Deployments

VirtualService-Live.yaml

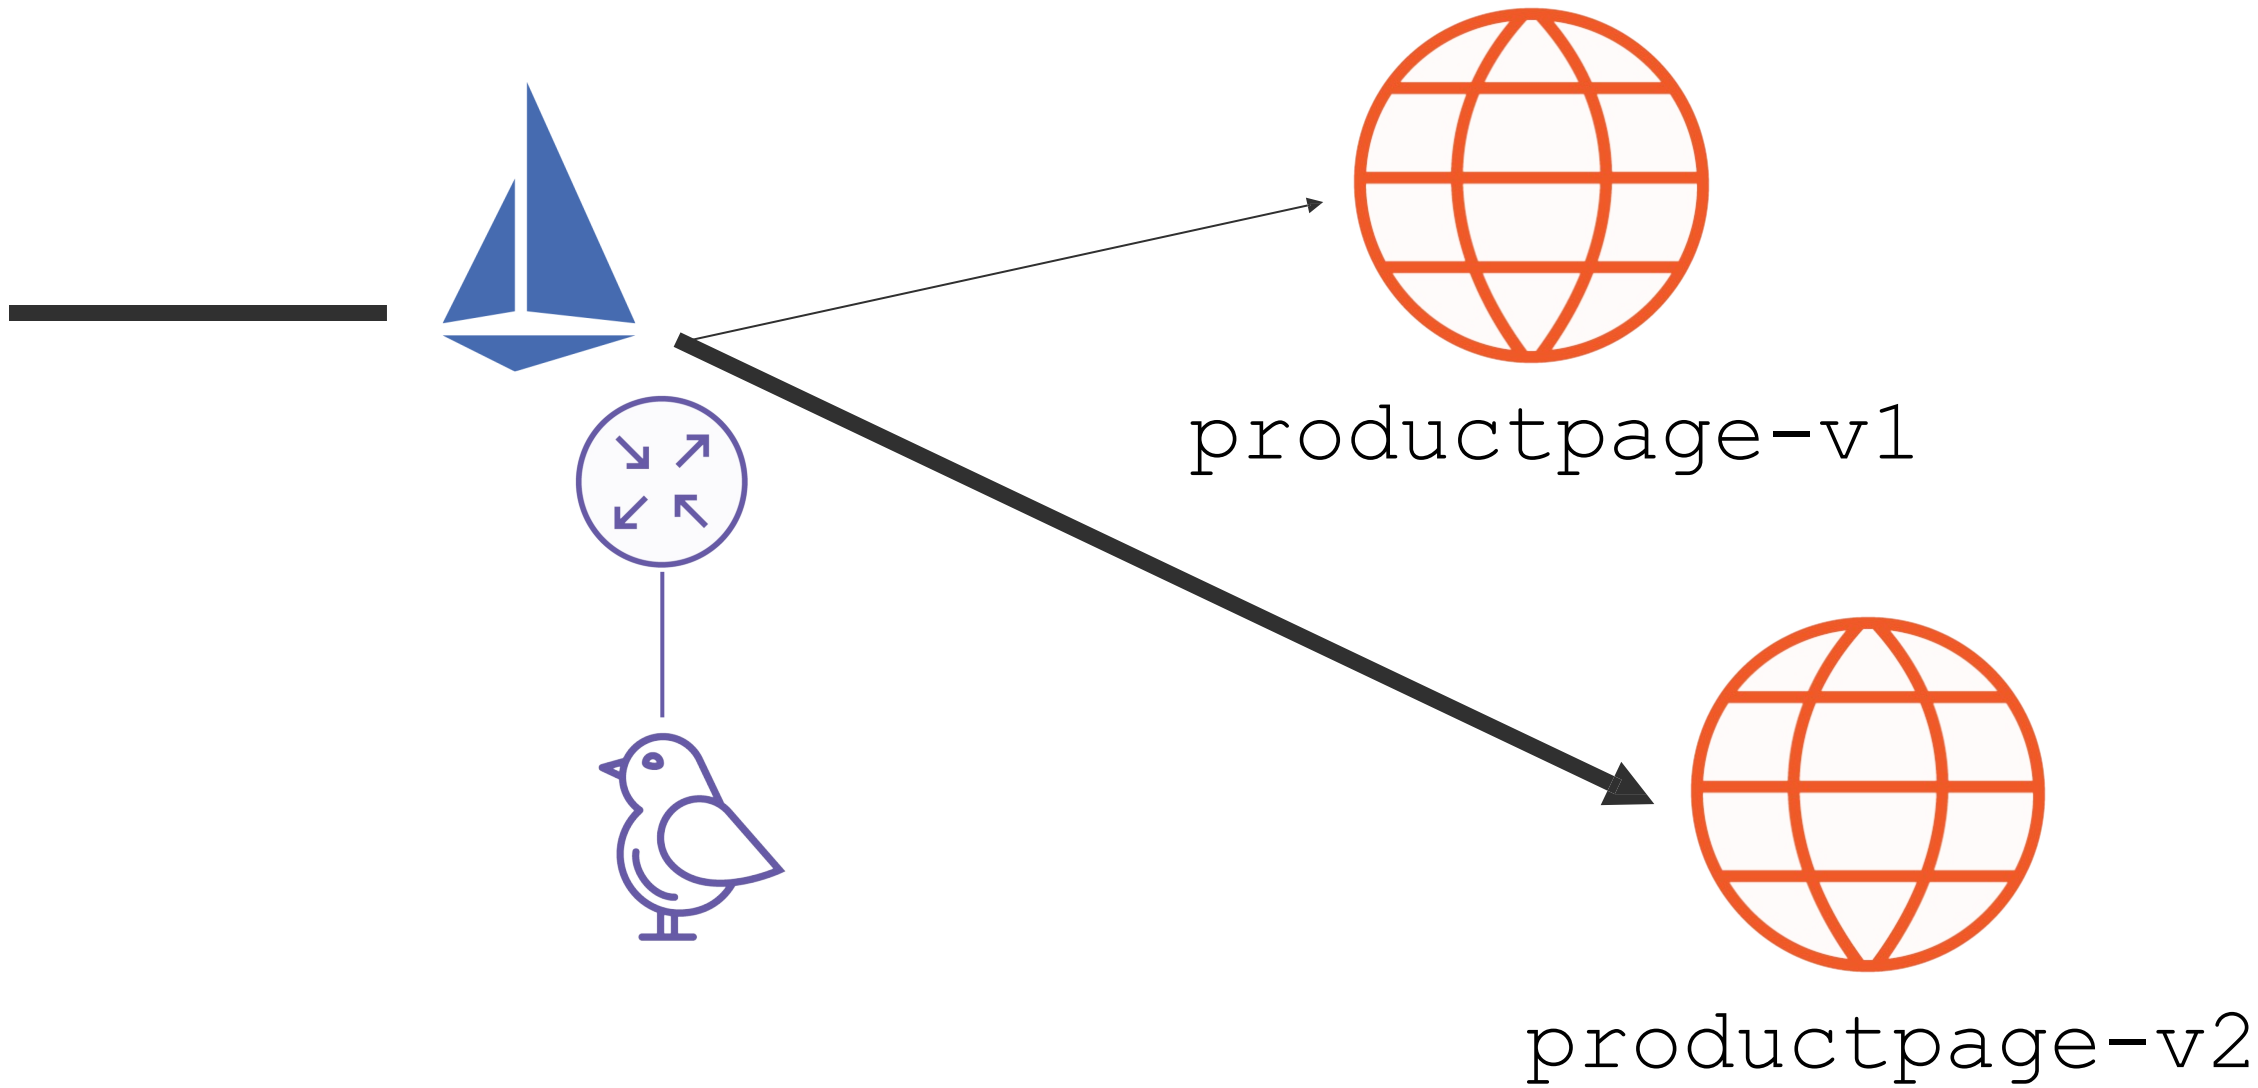

```
hosts:
- bookinfo.local
gateways:
- bookinfo-gateway
http:
  - route:
      - destination:
          host: productpage
          subset: v2
```

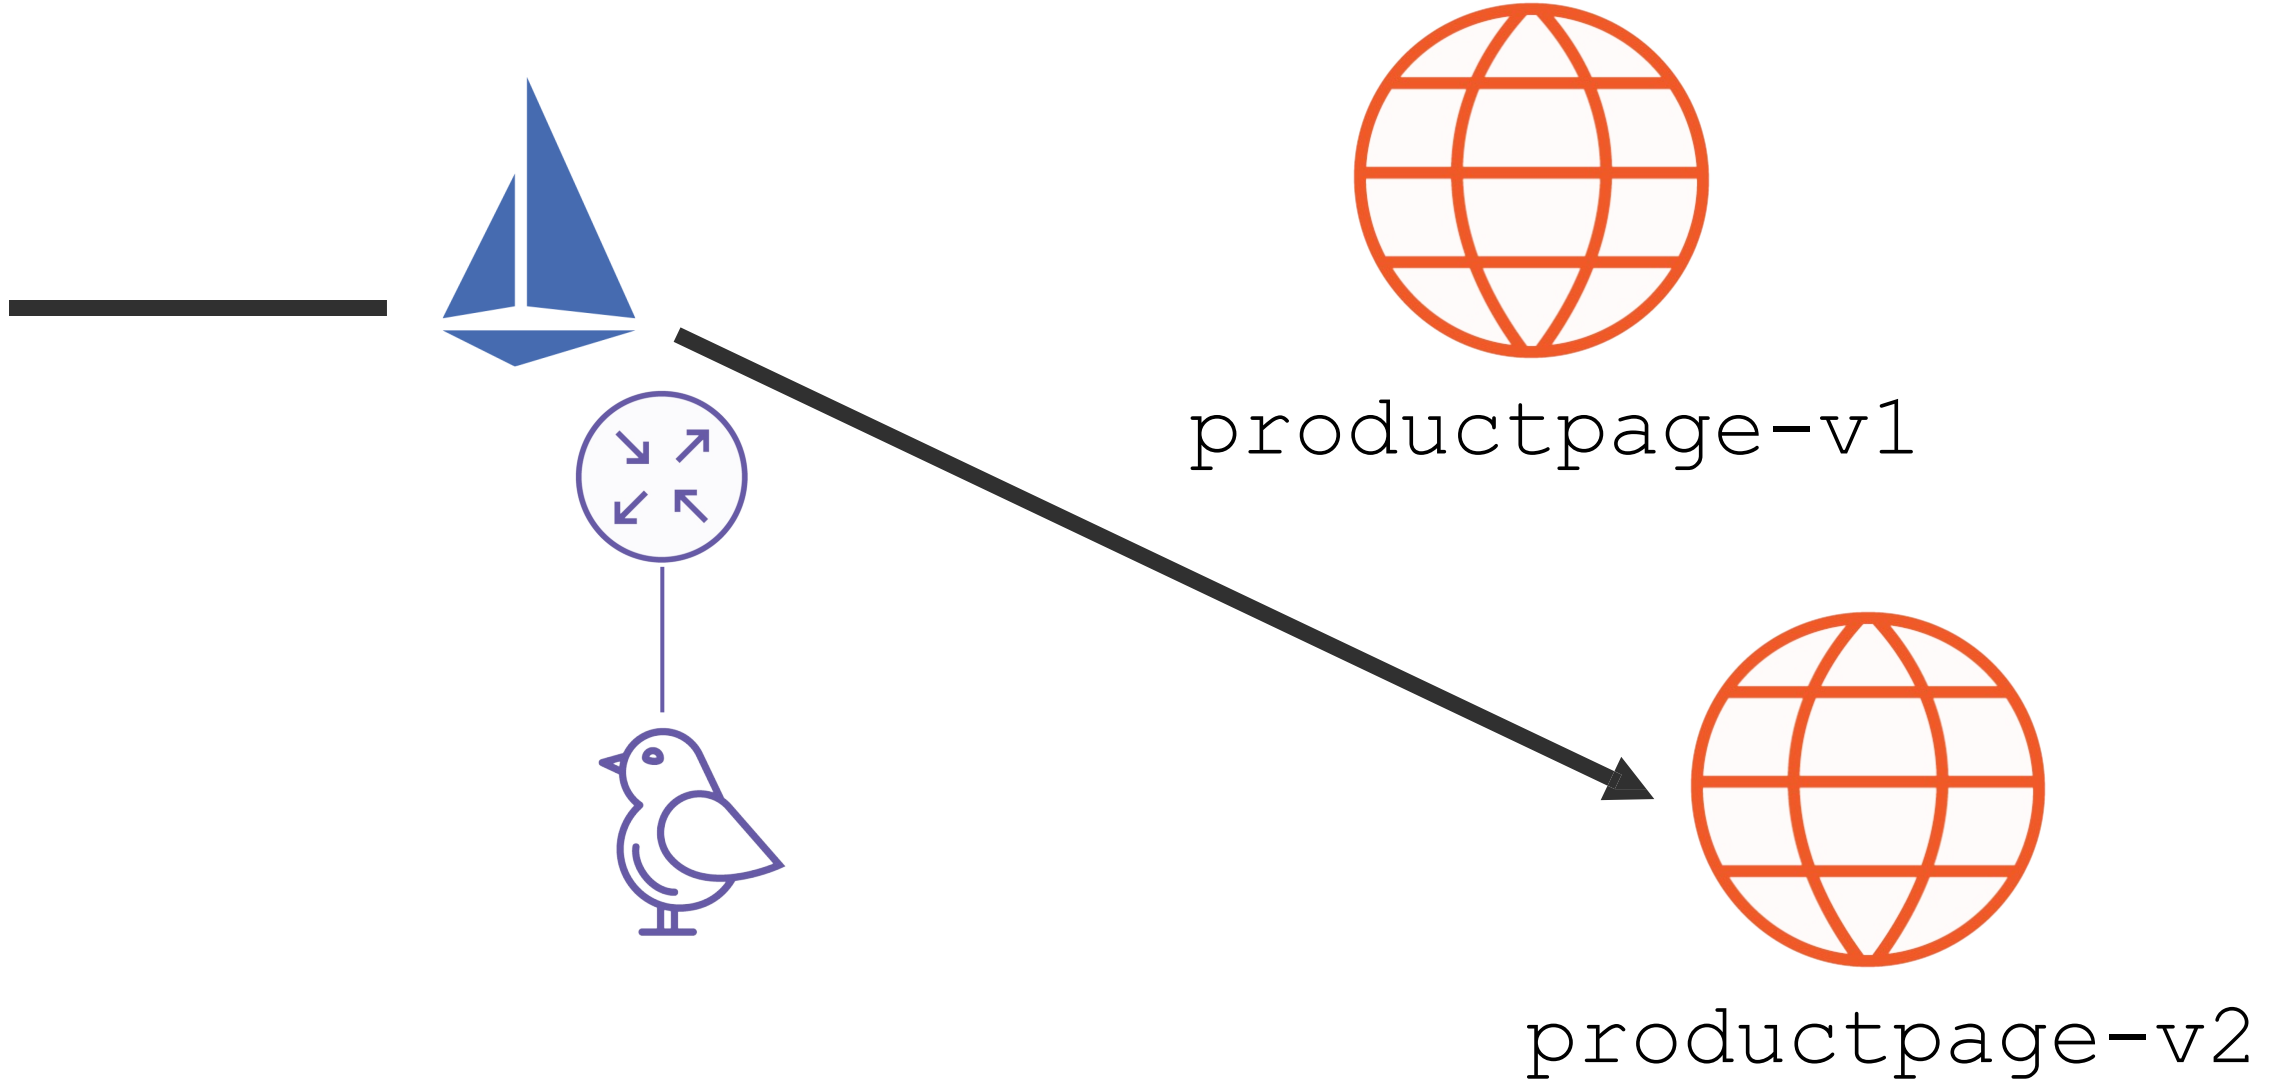

VirtualService-Test.yaml

```
hosts:
- test.bookinfo.local
gateways:
- bookinfo-gateway
http:
  - route:
      - destination:
          host: productpage
          subset: v1
```

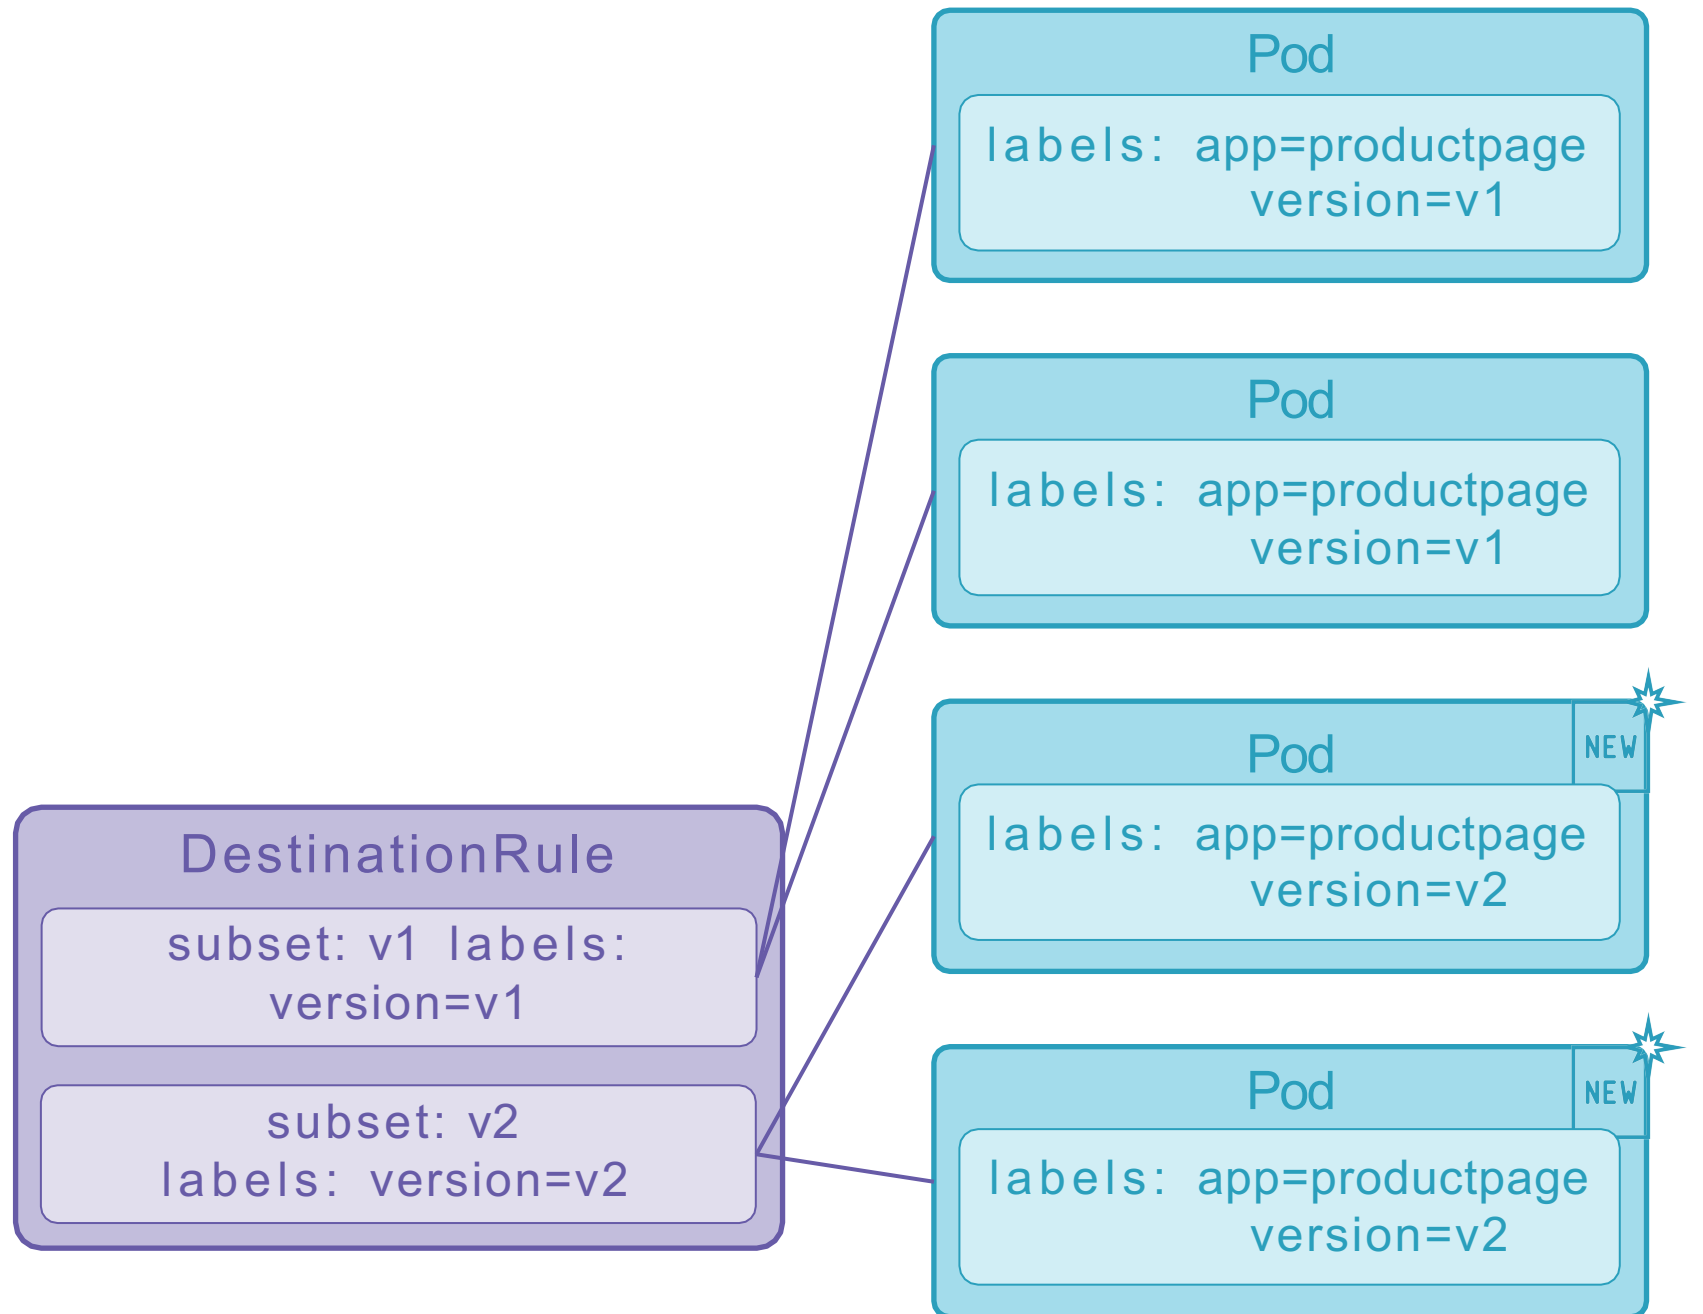

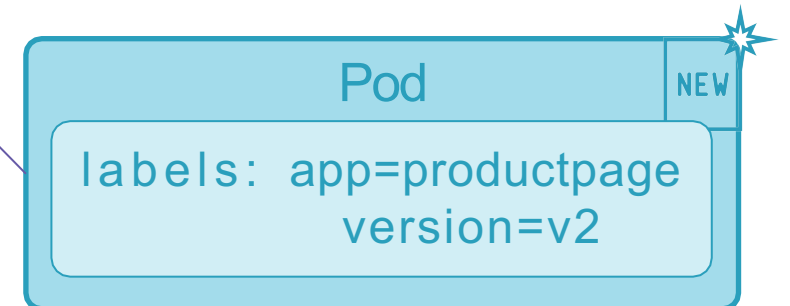

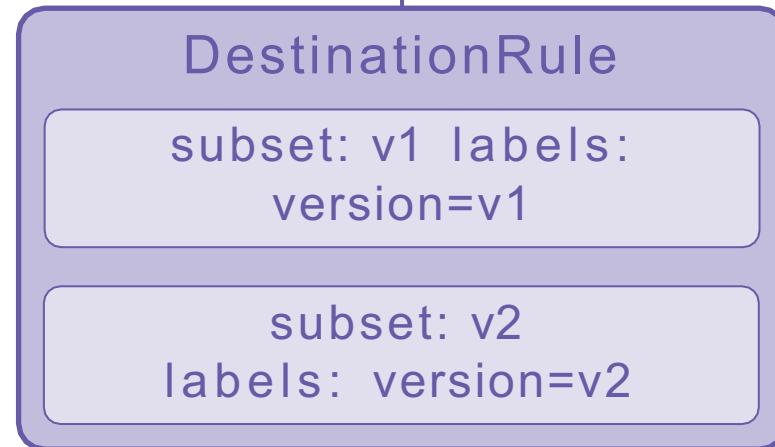

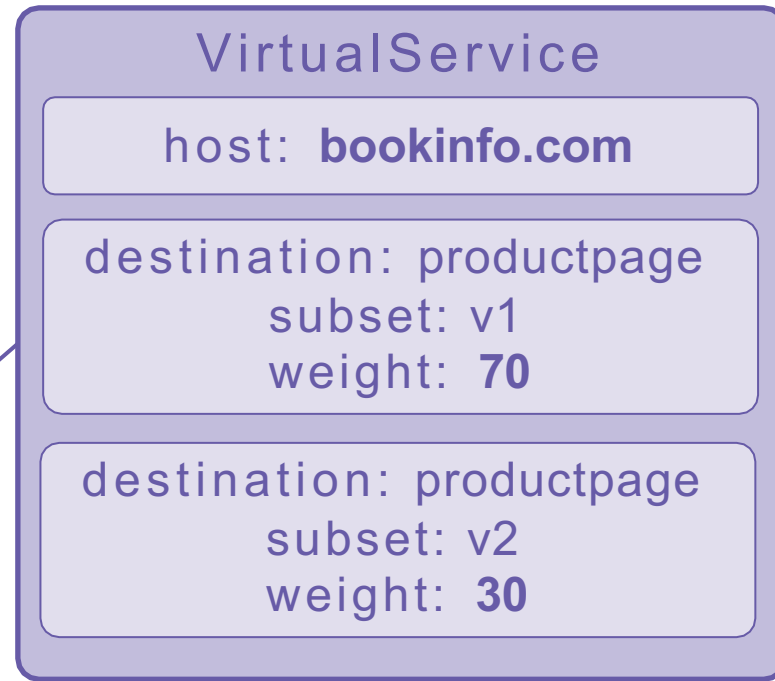

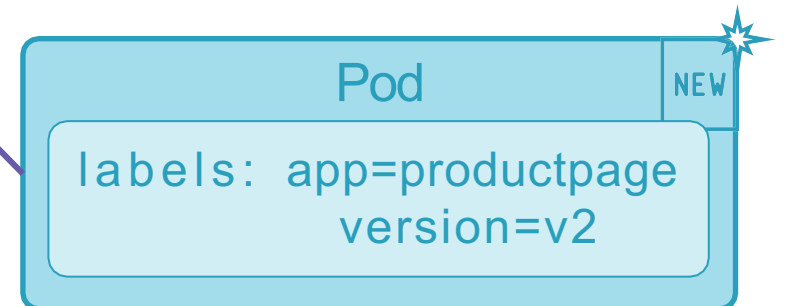

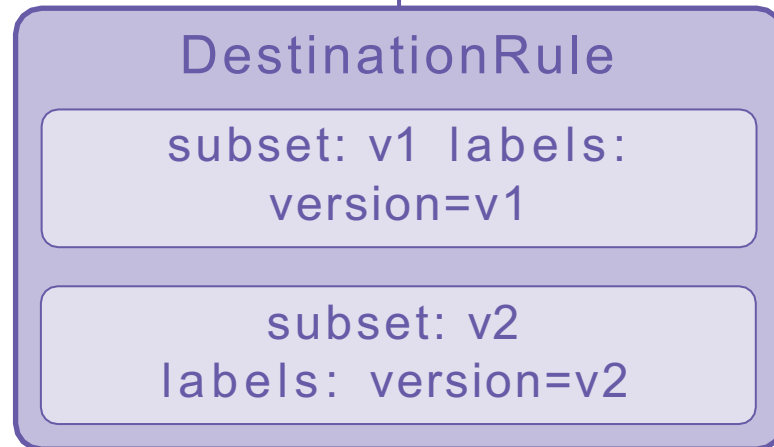

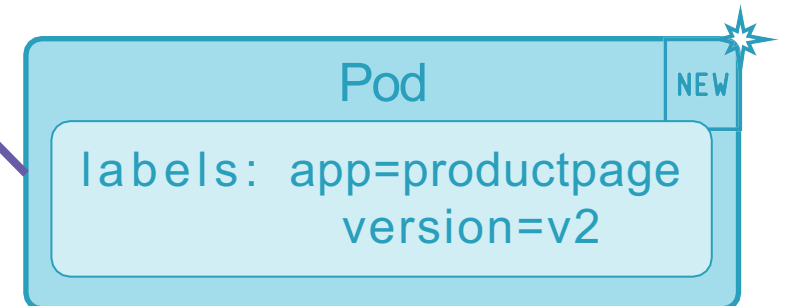

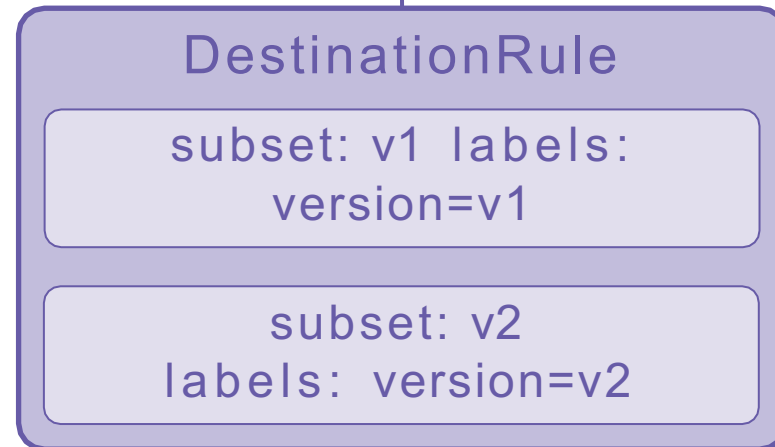

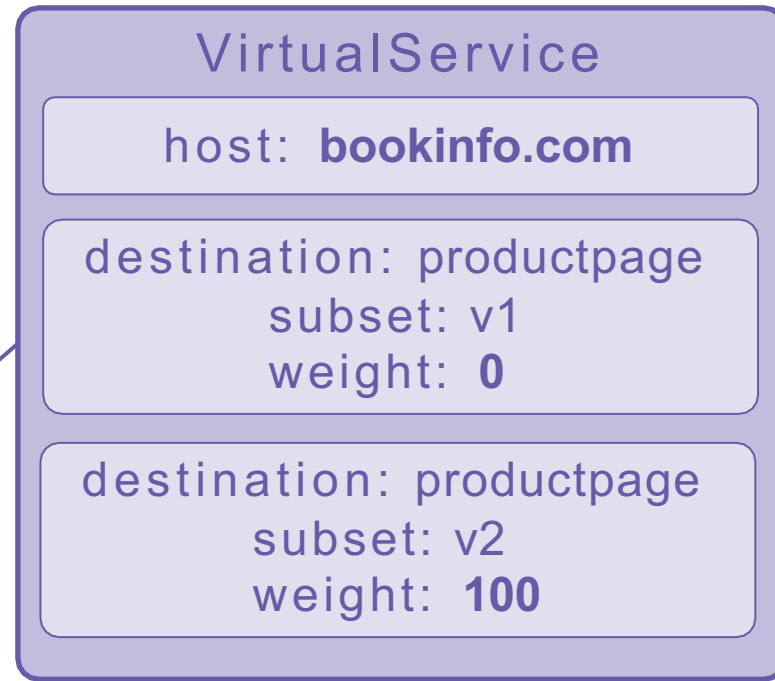

productpage

Demo

Canary deployment

- Traffic weighted to v1
- Shift traffic to v2
- Canary with sticky sessions

Canary Deployment

VirtualService-70-30.yaml

```
http:
  - route:
      - destination:
          host: productpage
          subset: v1
        weight: 70
      - destination:
          host: productpage
          subset: v2
        weight: 30
```

VirtualService-5-95.yaml

```
http:
  - route:
      - destination:
          host: productpage
          subset: v1
        weight: 5
      - destination:
          host: productpage
          subset: v2
        weight: 95
```

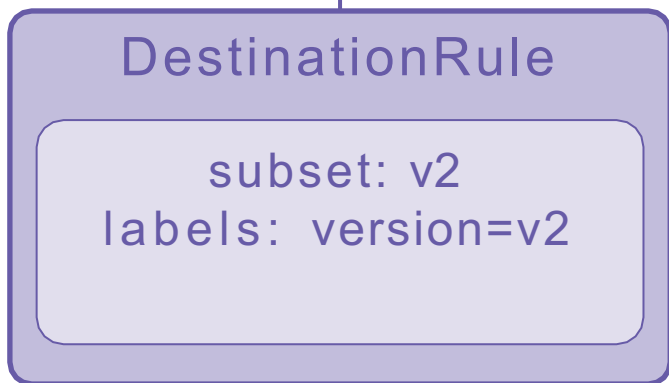

Canary Deployment with Sticky Sessions

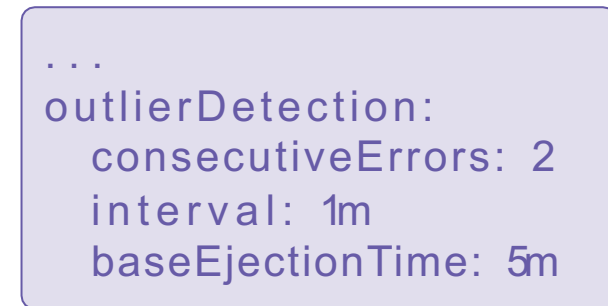

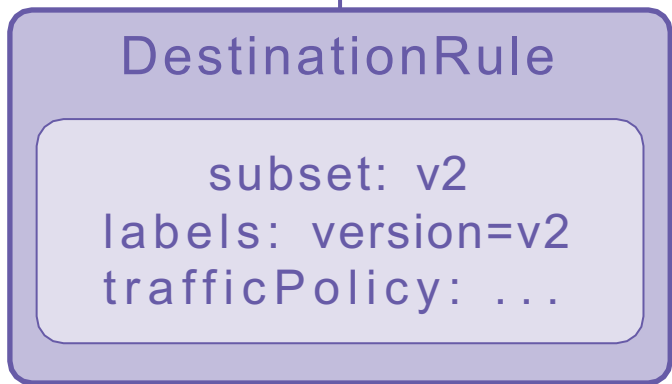

VirtualService.yaml

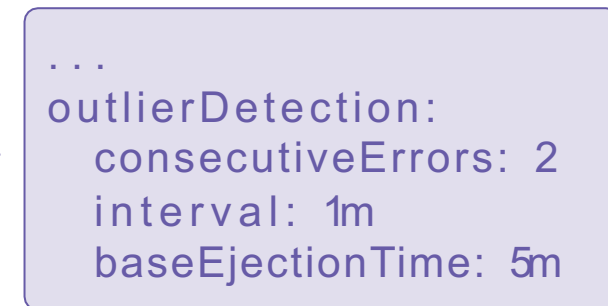

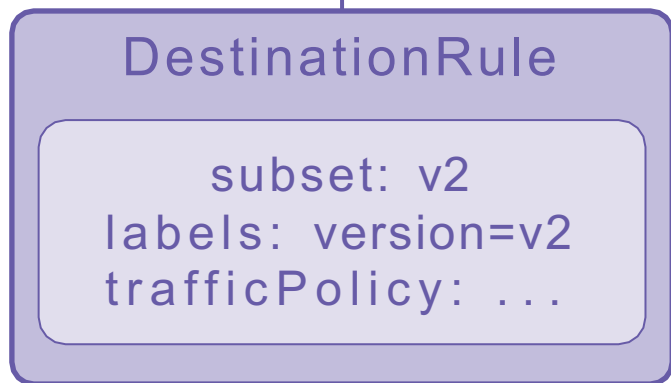

```
http:
  - match:
      - headers:
          cookie:
              regex: "^(.*?;)?(product-page=v2)(;.*)?$"
    route:
      - destination:
          host: productpage
          subset: v2
      - route:
          - destination:
              host: productpage
              subset: v1
            weight: 70
          - destination:
              host: productpage
              subset: v2
            weight: 30
```

Demo

Circuit breaker

- Deploy service update
- Failing instances
- Route with outlier detection

productpage

details-v2

details-v2

Circuit Breaker with Outlier Detection

DestinationRule.yaml

```
spec:
  host: details
  subsets:
    - name: v1
      labels:
        version: v1
    - name: v2
      labels:
        version: v2
  trafficPolicy:
    outlierDetection:
      consecutiveErrors: 2
      interval: 1m
      baseEjectionTime: 5m
      maxEjectionPercent: 100
```

Summary

Managing traffic

- Gateway
- VirtualService
- DestinationRule

Deployment strategies

- Dark launch
- Blue/green
- Canary

Self-healing apps

- Circuit breaker
